WARNING:
Improper installation, set-up, modification, operation or maintenance of the heating system can cause personal injury and property damage. Follow these instructions precisely.
If you require assistance or further information, contact a trained and certified installer or the gas supply company.

WARNING:
The operating instructions are part of the technical documents that must be handed over to the owner or operator of the heating system. Explain to the owner or operator how to use the heating system using the operating instructions. Make sure that they are familiar with all required information for the safe and proper operation of the heating system.

NOTICE:
In Massachusetts, this appliance must be installed by a licensed plumber or gas fitter.

These instructions are available in English and French.

Please keep these instructions for future reference.

18 Commissioning log for the appliance .............. 79

Index .................................................. 81
If you smell flue gas
▶ Switch off the heating system by shutting off the emergency shut-off switch.
▶ Open windows and doors.
▶ Call a trained and certified installer or service company.

DANGER: Risk of fatal injury from failing to consider your own safety!
▶ Never risk your own life. Your own safety must always take the highest priority

NOTICE: Risk of appliance damage from improper operation of the boiler!
▶ Only use the boiler for its intended purpose.
▶ Only operate the boiler if it has been installed and maintained per the instructions provided in the Installation Manual.
▶ Do not attempt to operate an appliance if any part of it is not in working order or is damaged.
▶ Use only original spare parts! The use of parts not supplied by the manufacturer may cause damage to the boiler, other property and personal injury. Also, boiler damage caused by the use of unauthorized parts is not covered by the warranty.

DANGER: Risk of fire when soldering and brazing!
▶ Take appropriate protective measures when soldering and brazing around combustible and flammable material.

NOTICE:
▶ The installation must comply with all applicable national, state, and local codes, rules, and regulations.
▶ The operator is responsible for the operational safety and regulatory compliance of the heating system.
▶ In the Commonwealth of Massachusetts, the appliance must be installed by a licensed plumber or gas fitter.

DANGER: Risk of personal injury or death from flue gas poisoning!
▶ Do not install a thermostatic flue gas damper downstream of the draft hood.
▶ Do not tamper with, remove, or attempt to repair the blocked vent switch.
▶ When replacing the blocked vent switch, install the new part in the original location.
▶ A blocked vent switch tripping more than once indicates a problem with the venting system or chimney which must be repaired immediately.
▶ Ensure none of the vent pipes and chimneys are damaged or blocked.
▶ Connect only one appliance to each venting system or chimney.
▶ The venting system must not feed into or route through another air extraction duct.
▶ The venting system must be inspected annually. All parts that show any signs of damage or corrosion must be replaced.
▶ Never close off or reduce the size of the combustion air openings.
▶ The boiler must not be operated until any obstructions have been removed.

DANGER: Risk of personal injury or death from explosion!
▶ Work on gas components may only be carried out by a trained and certified installer or service company.
▶ Appliance installation, the connection of gas and vent piping, initial commissioning, electrical connections, and service and maintenance must only be carried out by a trained and certified installer or service company.

DANGER: Risk of personal injury or death from fire!
▶ Do not use flammable or combustible material in the boiler room.
▶ It is recommended not to store any items within 16 inches (415mm) of the appliance.

CAUTION: Appliance damage from contaminated combustion air!
▶ Keep the combustion air free of corrosive substances, e.g. halogenated hydrocarbons from painting operations or beauty salons.
▶ Keep combustion air free from dust and lint, e.g. from laundry or agricultural operations.
▶ If clean room air is not available, fresh outdoor combustion air must be provided.

DANGER: Risk of personal injury or death from electric shock.
▶ Before removing the front panel, disconnect the heating system from the electrical power supply by shutting off the emergency shutoff switch or the heating system circuit breaker.
▶ It is not enough to switch off the control panel. Power to the panel must be disconnected! Ensure that the power is not restored unintentionally by following proper lock out/tag out procedures.
▶ Only qualified electricians are permitted to carry out electrical work.

DANGER: Safety devices!
▶ Never shut off safety valves!
▶ Hot water may escape from the safety valve at any time when the appliance is running.

DANGER: Risk of personal injury or death after a flood!
▶ Do not attempt to operate an appliance if any part of it has been under water.
▶ An appliance that was subject to flooding must be replaced.

NOTICE:
▶ Upon completion of the installation, these instructions should be handed to the owner and operator of the appliance.
▶ The installer must instruct the owner and operator on the functionality of the components and the proper operation of the boiler and the heating system.
▶ The boiler must be serviced annually including the main burner, ignition burner, the entire venting system, and the combustion air supply. All parts that show any signs of damage or corrosion must be replaced.
2 Scope of delivery

2.1 ZBR - Residential boiler for space heating and loading of indirect fired DHW tanks

Contents of package 1:
[1] Gas condensing boiler
[2] Set of documents for appliance
[5] Adapter for connection of a LWCO

Contents of package 2:
[6] Rail with connection box
[7] Flue adapter\(^1\)
[8] DHW tank temperature sensor (NTC)
[9] Hydraulics connection plate with mounting kit
[10] External supply temperature sensor (NTC)
[11] Bosch Room Controller with an integrated temperature sensor and set of documents

1) Concentric vent kit available as accessory.

---

Fig. 1 Scope of delivery heating boiler ZBR...-3A
2.2 ZWB - Residential combi boiler for space heating and DHW generation

Contents of package 1:
[1] Gas condensing boiler
[2] Set of documents for appliance
[5] Adapter for connection of a LWCO

Contents of package 2:
[6] Rail with connection box
[7] Flue adapter\(^1\)
[8] Hydraulics connection plate with mounting kit
[9] External supply temperature sensor (NTC)
[10] Bosch Room Controller with an integrated temperature sensor and set of documents

---

1) Concentric vent kit available as accessory.
3 Information about the appliance

ZBR appliances are residential boilers for central heating and loading of an indirect fired DHW tank.

ZWB appliances are residential combi boilers for central heating and on demand DHW heating.

The appliances comply with South Coast Air Quality Management District (SCAQMD) 2012 requirements: (Type-1) 14 Ng/J NOx (and/or 20 ppm at 3% O2).

3.1 Proper use

The Greenstar boiler is not for use in CSD-1 commercial installation.

The appliance may only be installed in closed loop hot water central heating systems.

Any other purpose is considered improper use. Any resulting damage is excluded from the manufacturer’s warranty.

The commercial and industrial use of the appliance for generating process heat is not permitted.

3.2 Overview of boiler types

Table 2 describes the meaning of the model number:

3.3 Rating plate

The rating plate is located at the right side of the appliance.

3.4 Appliance description

- Appliance for wall installation, regardless of chimney and room size
- Bosch Room Controller
- Intelligent boiler pump control
- Heatronic boiler control with 2-wire BUS
- Three-speed boiler circulator
- Automatic air vent (combi boiler ZWB..-3A only)
- Display
- Automatic ignition
- Continuously-controlled output
- Full protection via the Heatronic with flame rod and solenoid valves
- No minimum circulating water flow rate required
- Suitable for radiant floor heating
- Flue adapter for flue gas and combustion air with test ports
- Variable speed fan
- Gas premix burner
- Temperature sensor and temperature control for space heating
- Supply temperature sensor
- Temperature limiter
- Safety relief valve, pressure gauge
- Expansion vessel (combi boiler ZWB..-3A only)
- Connection possibility for DHW tank temperature sensor (NTC) (heating boiler ZBR..-3A only)
- Flue gas temperature limiter
- DHW priority (combi boiler ZWB..-3A only)
- Motorized 3-way valve (combi boiler ZWB..-3A only)
- Hydraulics connection plate
3.5 Accessories

Refer to the Bosch Product Catalog for a complete overview of all available accessories.
3.6 Product dimensions and minimum clearances

Fig. 4 Dimensions and minimum clearances (front view, rear view, side view)

[1] Appliance jacket
[2] Service cover
[3] Hydraulics connection plate

(*) Zero clearance from combustibles permitted, but 4" (102 mm) recommended for serviceability

(**) Distance to door, if mounted inside a closet

### 4 Regulations

Observe all rules, regulations, standards and guidelines applicable to the installation and operation of this appliance in your country.

In the Commonwealth of Massachusetts, this appliance must be installed by a licensed plumber and gas fitter. Valves external to the boiler must be fitted with T-handles and condensate piping must be installed in accordance with the State Plumbing Code.

### 4.1 Compliance with standards and regulations

The installation must conform to the requirements of the authority having jurisdiction or, in the absence of such requirements, to the latest edition of the National Fuel Gas Code, ANSI Z223.1./NFPA 54. In Canada, installation must be in accordance with the requirements of CAN/CSA B149.1, Natural Gas and Propane Installation Code.

This wall mounted condensing gas boiler complies in its design and mode of operation with the American National Standard ANSI Z21.13/CSA4.9, latest edition for Gas Fired Low Pressure Steam and Hot Water Boilers.

Other confirmed approvals and certifications are indicated by labels on the boiler.

Where required by the authority having jurisdiction, the installation must conform to the Standard for Controls and Safety Devices for Automatically Fired Boilers, ANSI/ASME CSD-1.

Install CO detectors per local regulations. Boiler requires yearly maintenance (chapter 15, page 67).

### 4.2 Operating limits of the boiler

The heat exchanger has been designed and certified in accordance with the ASME Boiler and Pressure Vessel Code, Section IV.

**Table 12 Operating limits**

- **Maximum boiler temperature:** 190 °F (88 °C)
- **Maximum operating pressure:** 30 psi (2.07 bar)
4.3 Additional regulations for installation in Massachusetts

(a) For all side wall horizontally vented gas fueled equipment installed in every dwelling, building or structure used in whole or in part for residential purposes, including those owned or operated by the Commonwealth and where the side wall exhaust vent termination is less than seven (7) feet [2150 mm] above finished grade in the area of the venting, including but not limited to decks and porches, the following requirements shall be satisfied:

- INSTALLATION OF CARBON MONOXIDE DETECTORS. At the time of installation of the side wall horizontal vented gas fueled equipment, the installing plumber or gasfitter shall observe that a hard wired carbon monoxide detector with an alarm and battery back-up is installed on the floor level where the gas equipment is to be installed. In addition, the installing plumber or gasfitter shall observe that a battery operated or hard wired carbon monoxide detector with an alarm is installed on each additional level of the dwelling, building or structure served by the side wall horizontal vented gas fueled equipment. It shall be the responsibility of the property owner to secure the services of qualified licensed professionals for the installation of hard wired carbon monoxide detectors.
  - In the event that the side wall horizontally vented gas fueled equipment is installed in a crawl space or an attic, the hard wired carbon monoxide detector with alarm and battery back-up may be installed on the next adjacent floor level.
  - In the event that the requirements of this subdivision can not be met at the time of completion of installation, the owner shall have a period of thirty (30) days to comply with the above requirements; provided, however, that during said thirty (30) day period, a battery operated carbon monoxide detector with an alarm shall be installed.
- APPROVED CARBON MONOXIDE DETECTORS. Each carbon monoxide detector as required in accordance with the above provisions shall comply with NPA 720 and be ANSI/UL 2034 listed and IAS certified.
- SIGNAGE. A metal or plastic identification plate shall be permanently mounted to the exterior of the building at a minimum height of eight (8) feet above grade directly in line with the exhaust vent terminal for the horizontally vented gas fueled heating appliance or equipment. The sign shall read, in print size no less than one-half (½) inch in size, “GAS VENT DIRECTLY BELOW. KEEP CLEAR OF ALL OBSTRUCTIONS”.
- INSPECTION. The state or local gas inspector of the side wall horizontally vented gas fueled equipment shall not approve the installation unless, upon inspections, the inspector observes carbon monoxide detectors and signage installed in accordance with the provisions of 248 CRM 5.08(2)(a) 1 through 4.

(b) EXEMPTIONS: The following equipment is exempt from 248 CRM 5.08(2)(a) 1 through 4:

- The equipment listed in Chapter 10 entitled “Equipment Not Required To Be Vented” in the most current edition of NFPA 54 as adopted by the board; and
- Product Approved side wall horizontally vented gas fueled equipment installed in a room or structure separate from the dwelling, building or structure used in whole or in part for residential purposes.

(c) MANUFACTURERS REQUIREMENTS - GAS EQUIPMENT VENTING SYSTEM REQUIRED. When the manufacturer of Product Approved side wall horizontally mounted gas equipment provides a venting system design or venting system components with the equipment, the instructions provided by the manufacturer for the installation of the equipment and venting shall include:

- Detailed instructions for the installation of the venting system or the venting system components; and
- A complete parts list for the venting system design or venting system.

(d) MANUFACTURERS REQUIREMENTS - GAS EQUIPMENT VENTING SYSTEM NOT PROVIDED. When the manufacturer of Product Approved side wall horizontally vented gas fueled equipment does not provide the parts for the venting of flue gases, but identifies special venting systems, the following requirements shall be satisfied by the manufacturer:

- The referenced special venting systems shall be included with the appliance or equipment installation instructions; and
- The special venting systems shall be Product Approved by the Board, and the instructions for that system shall include a parts list and detailed installation instructions.

(e) A copy of all instructions for all Product Approved side wall horizontally vented gas fueled equipment, all venting instructions, all parts lists for venting instructions, and/or venting design instructions shall remain with the appliance or equipment at the completion of the installation.

9. Pump heating zone 3
10. Outdoor temperature sensor (optional)
11. LWCO (Low Water Cut Off, 24V AC Transformer required)
12. DHW temperature sensor (connection with clear connector)
13. Optionally connect external system supply temperature sensor for system supply pipe here (with white plug)

For all accessories not included in the package please refer to the Bosch Product Catalog.
6 Installation

6.1 Notes on installation and operation

When installing and operating the heating system observe the following:
• The elevation of the installation location above sea level must be taken into account (→ Chapter 12.2).
• Follow all local building regulations regarding the installation conditions on site.
• The local building regulations regarding air supply and venting systems and the chimney flue connection.
• Electrical code requirements for connection to the electrical power supply.
• The technical regulations of the gas company regarding the connection of the gas burner to the local gas main.
• The regulations and standards relating to the DHW heating system.

6.1.1 Notes on installation and operation

Fill and make-up water for the heating system

Unsuitable fill and make-up water can result in the heating system scaling up or failing prematurely.

Recommended steps for commissioning a new or retrofit boiler installation

► Flush the system with clean water.
► Isolate the boiler, fill the system with fresh water and a boiler cleaner, run for 30 minutes to 1 hour. Under no circumstances may boiler cleaner be pumped through the boiler.
► Thoroughly flush the system with fresh water. Ensure all zones and loops are flushed.
► Empty out sediment traps.
► Systems containing antifreeze not approved by Bosch, must be completely flushed to ensure no old fluid remains.
► Fill the system with fresh water and the proper amount of inhibitor.
► Verify the pH is within the proper range.
► Add additional inhibitor if pH is not within the proper range.
► Check pH annually.
► If using antifreeze, fill with approved antifreeze and fresh water.
► Always follow the cleaner, antifreeze, or additive manufacturer’s instructions.
► Do not mix different manufacturer’s products.
► Follow manufacturer’s data to determine the anti-freeze ratio for the desired freeze protection temperature.

Recirculation pump/DHW recirculation lines

<table>

<td>33 - 66 ft (10 - 20 m)</td>
<td>0.92 gpm (3.5 l/min)</td>
</tr>
<tr>
<td>66 - 98 ft (20 - 30 m)</td>
<td>1.32 gpm (5 l/min)</td>
</tr>
</tbody>
</table>

Table 13 Recommended flow rates

Use service function 6.d, to determine the current flow rate (→ page 61).

Electrical connection of the DHW recirculation pump (→ page 48).
Connect the DHW recirculation line with the cold water inlet as close as possible to the Hydraulics connection plate.

Open vented heating systems
► Convert open vented heating systems into closed systems.

Gravity heating systems
► Connect the appliance to the existing piping system via a low-loss header with a sludge separator.

Galvanized radiators or pipes.
To prevent gas formation:
► Do not use galvanized radiators or pipes.

Plastic pipework
If using plastic pipework for the heating system (eg. underfloor/radiant heating), the type of pipe that should be used must be oxygen tight.

Use of a room temperature control
► Do not install thermostatic valves on radiators in the primary room.

Primary-secondary piping or a low loss header
Radiant floor, panel radiator, multi zone and application systems exceeding 70° (21 m) of 3/4" baseboard at a 20°F delta T and a flow rate of 4.0 gpm plus the necessary supply and return piping, require primary-secondary piping or a low loss header for hydraulic separation of the system from the boiler.

Water Chemistry Guidelines

NOTICE: Insufficient antifreeze can accelerate corrosion.
► Follow manufacturer’s instructions on antifreeze concentration.
► Frost protection level has to be checked annually during the regular scheduled maintenance of the condensing boiler.

NOTICE: System damage!
► It is the installer’s responsibility to ensure that the heating system is compatible with the boiler type and size installed.
► pH-value of the heating water to be kept between 7 and 8.5.
The following anti-freeze fluids and concentrations have been approved:

<table>

<td>1.1 %</td>
</tr>
</tbody>
</table>

Table 15 Corrosion inhibitors

- System fluid pH must be maintained between 7 and 8.5 to prevent system damage.
- Use only untreated water to fill the system.
- Do not use TSP (tri-sodium phosphate).
- Do not use fill water treated with salt bedding type exchangers (ion exchanger).
- Never introduce non-approved boiler treatment or similar additives.
- Only use fill water with a hardness below 7 grains.
- Filling with chlorinated water is acceptable if chlorine levels are below 100 ppm.
- Do not use inhibitors or other additives unless listed in this document.
- Consult a local water treatment specialist for recommendations if any of the above is outside the stated ranges.
- When using oxygen permeable PEX, the system must be separated from the boiler by a heat exchanger.
- A correctly sized and working expansion vessel must be installed.
- Do not exceed the maximum permissible flow rate through the boiler. Excessive flow can cause erosion damage to the heat exchanger.
- Eliminate System Leaks
  Continuous addition of make-up water will constantly add oxygen to the system and lead to corrosion. All system leaks must be repaired.

Boiler sealer
This boiler is not approved for use with boiler sealer.

LPG
To protect the appliance against high pressure (ANSI/Z223.1/NFPA54 (National fuel gas code) or CAN/CSA B 149.1 (Natural Gas and Propane installation code)):
- Install a pressure regulator with a safety valve.

6.1.2 Other important information
- The installation of this boiler must comply with all national and local code and regulations.
- Only operate this boiler with the combined air/flue system specifically designed and approved for it.
- Only use approved venting systems per the manufacturer's instructions.
- Do not dispose of untreated boiler condensate in septic systems.
- Inspect the sewer pipes for suitability before disposing of untreated boiler condensate into them.
- Verify with the local authority that disposing of untreated boiler condensate into public sewer systems is permitted.

6.2 Comparing the size of the integrated expansion vessel
The following diagrams allow verifying that the integrated expansion vessel has sufficient capacity for the intended application, or if an additional expansion vessel is needed (not for radiant floor heating).

The following standard conditions were used:
- Precharge volume 20% of the rated volume in the expansion vessel
- Differential to the safety valve of 7.25 psi (0.5 bar)
- Precharge pressure of the expansion vessel equal to the static system height above the boiler
- Maximum operating pressure: 30 psi (2.07 bar)

Fig. 13 Operating capacity of the expansion vessel in °F and gallons
Fig. 14 Operating capacity of the expansion vessel in °C and liters

Key to Fig. 13 and Fig. 14:
[I] Precharge pressure 7.25 psi (0.5 bar) (default setting)
[II] Precharge pressure 10.9 psi (0.75 bar)
[III] Precharge pressure 14.5 psi (1.0 bar)
\( t \) Supply temperature in °F (°C)
\( V_A \) System capacity in gallons (liters)
A Within operating capacity of the expansion vessel (left of the relevant curve)
B Additional expansion vessel required (right of the relevant curve)
- If results are borderline: Determine precise vessel sizes.
- If the results are to the right of the curve: Install additional expansion vessel.
6.3 ZBR-3A appliances (heating boilers): Selecting an expansion vessel

External expansion vessel

▶ Determine size of the expansion vessel.

Fig. 15 Sample installation - expansion vessel

6.4 Selecting the installation location

Installation location requirements

Observe the current national and local codes and regulations.

▶ Observe country-specific requirements.

▶ Observe installation instructions of the venting system accessories and their clearances.

Combustion air

To avoid corrosion, keep the supply of combustion air free of corrosive substances; contained in solvents, paints, adhesives, propellants and domestic cleaning agents.

Industrial sources

<table>
<thead>
<tr>
<th>Chemical cleaning</th>

Table 16 Corrosive materials

Surface temperature

The max. surface temperature of this appliance is below 185 °F (85 °C). According to ANSI/Z223.1/NFPA43 (National fuel gas code) and CAN/CGA B 149.1 (Natural Gas and Propane installation code), the appliance is approved for zero clearance to combustibles. For servicing a clearance of 4" (102 mm) is recommended.

6.5 Pre-installing pipes

▶ Secure the installation template (supplied with the technical documentation) to the wall; observe the minimum side clearances of 4 inches (102 mm) (page 9).

▶ Drill holes for the appliance and for the hydraulics connection plate in accordance with the mounting template.

Fig. 16 Mounting template

NOTICE: For walls with insufficient load capacity, the appliance and the hydraulics connection plate must be mounted on a sheet of plywood or similar reinforcement.

▶ Remove the mounting template.
Secure the hydraulics connection plate and the mounting bracket with the mounting kits supplied.

Fig. 17 Mounting of the hydraulics connection plate and the mounting bracket

Fig. 18 Hydraulics connection plate for heating boiler ZBR...-3A (front view)

- Heating supply, R 1" NPT
- Gas, R 3/4" NPT
- Heating return, R 1" NPT

- Cold water, R 3/4" NPT
- Heating return, R 1" NPT

Fig. 21 Hydraulics connection plate for combi boiler ZWB...-3A (top view)

- Determine pipe size for the gas supply.
- To fill and drain the system, install a fill and drain valve at the lowest point.
6.6 Mounting the appliance

**NOTICE:** Residue, metal shavings, and contaminants in the piping can damage the appliance.

- Flush the piping thoroughly and completely to remove all residue.
- Follow the instructions with respect to water quality (→ Chapter 6.1, page 32).

Remove packaging, observing all notes and symbols.

- On the rating plate, check the identification of the target country and suitability for the gas type supplied by the local gas utility company (→ page 10).

**Removing the cover**

The cover is secured with two screws against unintentional removal (electrical safety).

- Always keep the cover secured with these screws.

- Undo screws (step 1).
- Lift strap (step 2) and remove cover toward the front (step 3).

**Hanging the appliance**

- Place flat gaskets on the connections of the hydraulic bracket.
- Hang appliance on the mounting bracket.
- Tighten the union nuts on the pipe connections.

6.7 Installing a low water cut off (LWCO)

The boiler is equipped with several sensors that prevent firing or running the boiler in case of low water pressure or low water levels. Nevertheless code may require the installation of a separate low water cut off (LWCO).

The boiler is equipped with a dedicated port for installation of a LWCO on the supply pipe inside the boiler cabinet. This location represents the minimum water level for safe operation of the boiler.

The LWCO device must be specified for an ambient temperature of 176 °F (80 °C) and a water temperature of 250 °F (121 °C). It needs a dry contact.

The following LWCO is approved with the boiler:

- Hydrolevel Safgard 1100

The device is available at most Bosch wholesalers. It requires an external 24VAC 20VA transformer provided on site.

The Hydrolevel Safgard 1100 is installed in the supply pipe to the left of the heat exchanger.

- Disconnect the boiler from power by shutting off the emergency shutoff switch or disengaging the heating system circuit breaker.
- Drain the boiler.
- Remove the safety clip from the dummy plug in the supply pipe (step 1).
- Pull off the dummy plug (step 2) and place with the boiler documentation.
- Ensure the O-ring remains in place on the pipe.
- Lubricate the O-ring.

**NOTICE:**

Residue, metal shavings, and contaminants in the piping can damage the appliance.

- Flush the piping thoroughly and completely to remove all residue.
- Follow the instructions with respect to water quality (→ Chapter 6.1, page 32).

The cover is secured with two screws against unintentional removal (electrical safety).

- Always keep the cover secured with these screws.

If other LWCO devices are to be used, they must be installed external to the boiler.

The Hydrolevel Safgard 1100 is installed in the supply pipe to the left of the heat exchanger.

- Disconnect the boiler from power by shutting off the emergency shutoff switch or disengaging the heating system circuit breaker.
- Drain the boiler.
- Remove the safety clip from the dummy plug in the supply pipe (step 1).
- Pull off the dummy plug (step 2) and place with the boiler documentation.
- Ensure the O-ring remains in place on the pipe.
- Lubricate the O-ring.

**Fig. 23 Installing a LWCO device - removing dummy plug**
Screw the LWCO as far as possible into LWCO adapter located in the boiler accessory kit. Follow the Hydrolevel Safgard 1100 instructions.

![Fig. 24 Installing a LWCO device - LWCO adapter](image)

Push the adapter with the LWCO onto the pipe (step 1) and secure with the clip (step 2).

![Fig. 25 Installing a LWCO device – securing with a clip](image)

Connect the wires of the LWCO (→ chapter 7.4, page 50).

If fault \(d3\) is displayed when commissioning the boiler, purge the boiler properly and check the boiler water pressure.

### 6.8 Connecting flue gas accessories

Optional vent systems are:
- Twin pipe PVC / CPVC 2” / 3”
- Twin pipe PP 2” (50 mm) / 3” (80 mm) (M&G Duravent PolyPro and Centrotherm InnoFlue)
- Concentric PP 3” / 5” (80/125 mm) (Bosch)

In case of using the **twin pipe adaptor**:

- The twin pipe adaptor is supplied with the boiler kit as standard and is certified as a part of the vent system.

Install the vent flange and gasket with the screws enclosed.

![Fig. 26 Attaching the vent flange and gasket](image)

- Gasket
- Vent flange
- Screws

Insert the flue gas adapter as far as it will go into the vent flange and align it.

![Fig. 27 Flue gas adapter](image)

- Vent flange
- Flue gas adapter
- Combustion air test port
- Flue gas test ports

Tighten the screws.

To avoid premature wear of the gaskets DO NOT use lubricants.
In case of **open venting**:
▶ Use basket on the air intake.

In case of **concentric venting system**:

As an alternative to twin pipe venting, a purposely designed and built telescopic concentric vent kit can be obtained as an accessory from Bosch Thermotechnology for a horizontal direct vent wall termination. This vent system can be used for vent lengths of 2 feet to 3 feet (610 mm to 915 mm).

For more details on connecting the flue system, refer to the installation instructions for the flue kit.

---

**Fig. 28** Horizontal venting system (telescopic concentric vent kit)

[1] Intake
[2] Exhaust
L 2 feet to 3 feet (610 mm to 915 mm)
▶ Install the concentric vent adaptor with the screws enclosed.

**Fig. 29** Installing the concentric vent adaptor

[1] Concentric vent adaptor
[2] Screws
[3] Combustion air test port
[4] Flue gas test port

### 6.8.1 Installation of the exhaust and air intake system

**NOTICE:**
▶ Vent connectors serving appliances vented by natural draft shall not be connected to any portion of mechanical draft systems operating under positive pressure.

---

---

**NOTICE:**
▶ Burner damage!
▶ Avoid drawing in combustion air excessively loaded with dust or airborne particles.

---

**DANGER:**
▶ Ensure that the flue pipes and seals are not damaged.
▶ Use only sealing compounds (primer and glue) approved with the vent material.
▶ Never install a barometric nor a thermally controlled vent damper with this boiler.
▶ Connect only one boiler to each flue system or chimney flue.
▶ Do not route the flue system piping through or inside another duct that is used for exhausting air or other flue gases.
▶ The condensate trap must be primed at all times. Failure to do so may allow combustion gases to escape into boiler room.
▶ External insulation on plastic vent pipe is prohibited.

---

Consult local and state codes pertaining to special building code and fire department requirements. Adhere to national code requirements.

---

Observe the listed maximum lengths of vent system, which are boiler model dependent (→ chapter 6.8.3).

---

**DANGER:** Improper venting of the Greenstar boiler can result in excessive levels of carbon monoxide which can result in severe personal injury or death.
▶ The boiler must be vented in accordance with the “Venting of Equipment” section of the latest edition of ANSI Z 223.1 / NFPA 54 Natural Fuel Gas Code and/or the "Venting systems and air supply for appliances" section of the latest version of CAN/CGA B149.1 Natural Gas and Propane Installation Code in Canada and in accordance with all applicable local building codes.

---

**NOTICE:**
▶ To avoid moisture and frost build-up and to maintain clearances to openings on adjacent homes, 45° and 90° elbows or tees may be attached to the end of the vent termination pipe to direct exhaust plumes away from the adjacent structure. The total allowable vent length, maximum number of elbows and distance to air intake restrictions must be adhered to.
Direct vent installations (sealed combustion)

For direct vent applications all applicable items below must be met.

![Diagram of vent and combustion air pipe position of a sealed combustion system]

**Fig. 30 Vent and combustion air pipe position of a sealed combustion system**

1. Intake
2. Exhaust
X At least 1 foot (305 mm)

The termination shall terminate at least 1 foot (305 mm) below, 1 foot (305 mm) horizontally from or 1 foot (305 mm) above any door, window or gravity air inlet into any building (→ fig. 31 [1], [X1], [X3], page 41).

If multiple boilers are installed in a row, allow at least 1 foot (305 mm) clearance between the vent termination of one and the combustion air intake of the other.

Vent termination must be at least 1 foot (305 mm) above grade, anticipated snow line or roof surface (Canada 1-1/2 feet (457 mm) minimum) (→ fig. 31 [Y1], page 41).

Vent termination must be at least 7 feet (2135 mm) above a public walkway (→ fig. 31 [X2], page 41). Ensure that condensate spilling from the termination does not create a hazard or a nuisance.

Vent termination must be 3 feet (915 mm) above any forced air intake within 10 feet (3050 mm) (→ fig. 31 [1], [Y3], page 41).

Do not extend exposed vent pipe outside the building beyond recommended distance. Condensate could freeze and block vent pipe.

Vent should terminate at least 3 feet (915 mm) away from adjacent walls, inside corners and 5 feet (1525 mm) below roof overhang (→ fig. 31 [X2], [X3], page 41).

It is not recommended to terminate vent above any door or window, condensate can freeze causing ice formations.

Do not use chimney as a raceway if another boiler or fireplace is vented into or through chimney.

All PVC/CPVC vent pipes must be glued, except for the flue gas adapter-pipe connection.

The exhaust pipe must be properly supported and pitched a minimum of ¾ inch (6.35 mm) per foot back to the boiler. This allows the condensate to properly drain.

**NOTICE:** Damage of 2 inch PVC pipes.

For ZBR42-3A and ZWB42-3A use 2 inch CPVC-pipes or 3 inch pipes.

All PP/CPVC combustion air and vent pipe materials and fittings must comply with the following and must be UL approved venting material:

| Material                        | Item                                      | United states              | Canada                              | ZBR16-3A | ZBR21-3A | ZBR28-3A | ZBR35-3A | ZBR42-3A | ZWB28-3A | ZWB35-3A | ZWB42-3A |

Table 17 Materials for pipe
For installations in Canada, field supplied plastic vent piping must comply with CAN/CGA B149.1 (latest edition) and be certified to the Standard for Type BH Gas Venting systems. Components of this listed system shall not be interchanged with other vent systems or unlisted pipe/fittings. All plastic components and specified primers and glues of certified vent systems must be from a single system manufacturer and not intermingled with other system manufacturer's vent system parts.

The supplied vent connector and separate available vent termination are certified as a part of the Greenstar Boiler.

### NOTICE:

- DO NOT use cellular core pipe.
- DO NOT use PVC when using anti-freeze in the primary circuit of the boiler. Use CPVC, PP or stainless steel only!
Fig. 31 Vent and combustion air pipe position

[1] Forced Air Inlet
[2] Gravity Air Inlet
[3] Exhaust terminal

X₁ 1 foot (305 mm)
X₂ Clearance in accordance with local installation codes and the requirements
X₃ 1 foot (305 mm) USA
3 feet (915 mm) Canada
X₄ Clearance in accordance with local installation codes and the requirements
X₅ 7 feet (2135 mm)²
Yₐ At least 1 foot (305 mm) above grade or snow line
Yₐ Exhaust terminal must be at least:
3 feet (915 mm) above forced air inlet within
10 feet (3050 mm) horizontally - USA
6 feet (1830 mm) above forced air inlet - Canada

1) For Clearances not specified in ANSI Z223.1 / NFPA 54 or CSA B149.1
Clearance in accordance with local installation codes and the requirements of the gas supplier including the Authority Having Jurisdiction

2) A vent shall not terminate directly above a sidewalk or paved driveway that is located between 2 single family dwellings and serves both dwellings.
6.8.2 Approved examples of horizontal and vertical venting installation

**NOTICE:**
- Place pipe supports every 5 feet (1525 mm) of horizontal and vertical run, beginning with support near boiler.
- The condensate must be disposed of in accordance with applicable rules.
- Periodic cleaning of the vent terminal and air-intake screens is mandatory.
- Avoid locating vent terminals near equipment or building features which can be subject to degradation from exhaust gases.
- If multiple boilers are installed in a row, allow at least 1 foot (305 mm) clearance between the vent termination of one and the combustion air intake of the other.

Installation

6.8.3 Vent and combustion air pipe lengths

With Flex Pipe the maximum length is reduced by 50%. Flex Pipe according to the suppliers instructions for use in the vertical part of the installation only.

3" (76 mm) Vent and combustion air pipe

For all installation situations and for all appliances the maximum vent and combustion air pipe length is 100 feet each, with no more than 8 elbows each.

2" (50 mm) Vent and combustion air pipe

The maximum combined vent and combustion air pipe length (→ tab. 20, 21 and 22) depend on the installation situation, the appliance type and the number of elbows used.

Table 20 Vent and combustion air pipe lengths with 2" diameter and separate terminations
Making the electrical connections

7 Making the electrical connections

7.1 General notes

DANGER: Risk of electric shock!

► Before working on the power supply (120 VAC), disconnect the boiler from the grid by shutting off the emergency shutoff switch or disengaging the heating system circuit breaker. Take measures to prevent accidental reconnection.

► It is not sufficient to simply shut off the controls.

► Observe all applicable electrical codes and regulations.

Electrical components must be installed by a trained and certified electrician and the installation must meet the National Electric Code as well as all applicable local codes and regulations.

The boiler must be properly electrically grounded in accordance with the requirements of the authority having jurisdiction or, in the absence of such requirements with the National Electrical Code, ANSI/NFPA 70 and/or the Canadian Electrical Code Part I, CSA C221.1, Electrical Code.

Greenstar
6 720 818 060 (2016/03)
Making the electrical connections

All appliance modulation, control and safety components are tested and pre-wired for use.

Observe safety precautions and all rules and regulations required by local code and the National Electric Code.

Fuses

The appliance is protected with a fuse. It is located on the circuit board (Fig. 8, page 16).

Replacement fuses can be found on the back of the cover (Fig. 43).

Controls and modules

For installation and electrical connection of controls and modules, see the installation instructions of the accessory.

7.2 Low voltage electrical connections in the Heatronic boiler control

7.2.1 Open the Heatronic boiler control

NOTICE: Small pieces of wire can cause shorts and damage the electronics.

Unhook the clip (step 1) and fold the Heatronic down (step 2).

Remove screws (step 1), unhook cable and remove cover (step 2).

Fig. 43 Remove the cover

7.2.2 Connecting the BUS-system

Connect only Bosch room controls to the internal BUS of this boiler. For further details see the technical documentation of the BUS system components (e.g. CRC200 and CZM100).

NOTICE: Small pieces of wire can cause shorts and damage the electronics.

Unhook the clip (step 1) and fold the Heatronic down (step 2).

Unhook the clip, unhook cable and remove cover.

Fig. 44 Electrical wiring BUS-cable at the boiler

Fig. 45 Schematic of electrical wiring of Bosch room control and boiler

1) Terminal at the boiler reads BUS or BB, both indicating connection of the 2-wired Bosch BUS system.
7.2.3 Connecting the outdoor temperature sensor
- Set up WWSD according to the instruction manual of CRC200.
- Insert cable for the outdoor temperature sensor.
- Secure the cable with the strain relief.

7.2.4 Connecting the DHW tank temperature sensor (only heating boiler ZBR..-3A)
Wire the DHW tank temperature sensor directly to the appliance terminals. The sensor is provided with the appliance.
Do not exceed a sensor cable length of 33 feet (10 m).
- Punch out plastic insert.
- Plug connector into the circuit board.
- Insert the cable of the DHW tank temperature sensor.
- Secure the cable with the strain relief.

7.2.5 Connecting additional accessories
- For splash-proof (IP) strain relief, cut the grommet to match the diameter of the cable.

Fig. 48 Cut off grommets
- Feed cable through strain relief and connect accordingly.
- Secure the cable on the strain relief.

Connecting temperature guard TB 1 (external manual reset high limit or low water cut off (LWCO))
This connection allows the installation of external safety switches.
- External manual reset high limit
- Low water cut-off (LWCO)
- Radiant overheat protection

Fig. 49 Electrical wiring TB1
When the temperature guard trips, central heating and DHW modes are interrupted.

Connecting the supply temperature sensor (e.g. for low-loss header or system supply pipe)
Do not exceed a sensor cable length of 33 feet (10 m).

Supply temperature sensor for system supply pipe
(➔ Fig. 50 [2]) must be installed in closest vicinity with boiler supply Tee.
Making the electrical connections

Fig. 50 Mounting supply temperature sensor right next to boiler supply
[1] System secondary line – supply pipe
[2] Supply temperature sensor for system supply pipe
[3] Boiler primary line – supply pipe 1"
[4] Boiler primary line – return pipe 1"

Fig. 51 Electrical wiring of external supply temperature sensor
The service function 7.d connection of an external supply temperature sensor is automatically set to 01 (page 62).

Connecting Third party room thermostats or zone controls
A voltage free (dry contact) third party room thermostat or heat demand from a relay panel can be used to send an ON/OFF signal to the appliance.

Fig. 52 Electrical wiring third party room thermostat or zone control
To communicate a heat demand the third party room thermostat or zone control must connect pins 2 and 4.

7.3 Electrical connections in the junction box (120 VAC)

7.3.1 Mounting rails for junction box
► Hold the rail against the appliance from below (step 1) and fasten with the screws from the outside or inside (step 2).
► Loosen junction box from the rail (step 3).

Fig. 53 Mounting rails for junction box

7.3.2 Connecting an external heating zone pump or DHW recirculation pump
Without accessories the appliance offers the connection of one heating zone pump, one circulator of an unmixed heating circuit, or one DHW recirculation pump.
The pump used must have the following connection values: 120 VAC, max. 2 A.
► Route cable from pump to appliance.
► Insert cable into the junction box as shown in Fig. 55.
Making the electrical connections

▶ Connect cable to the black plug according to Fig. 54.

Fig. 54  Attach plug (external pump)
[1] L (120 VAC, 60 Hz)
[2] PE (GND, Ground)
[3] N (Neutral)
[4] Black plug (in the junction box upon delivery)
▶ Connect black plugs and insert grommet until stop.

▶ Connect cable to the red plug according to Fig. 56.

Fig. 56  Attach plug (external DHW tank loading pump or 3-way valve)
[1] L (120 VAC, 60 Hz)
[2] PE (GND, Ground)
[3] N (Neutral)
[4] Red plug (in the junction box upon delivery)
▶ Connect red plugs and insert grommet until stop.

▶ Use service function 5.E, to set connection to 01 (DHW recirculation pump) (➔ page 61)
- or -
▶ Use service function 5.E to set connection to 02 (external heating zone pump in an unmixed heating circuit) (➔ page 61).
- or -
▶ Use service function 5.E to set connection to 03 (external heating pump) (➔ page 61).

The DHW recirculation pump is controlled by the Bosch Room Controller.

7.3.3 DHW tank loading pump or 3-way valve with spring return (only heating boiler ZBR..-3A)
The pump used must have the following connection values: 120 VAC, max. 2 A.
▶ Route cable from pump or 3-way valve to appliance.
▶ Insert cable into the junction box as shown in Fig. 57.

Fig. 57  Cable connected (external DHW tank loading pump or 3-way valve)
▶ Mount the 3-way valve for space heating operation when de-energized, and DHW tank loading when energized.
▶ Use service function 1.F to set pump mode. (➔ page 58).

7.3.4 Connecting mains power supply
▶ Route the power cable (AC 120 V, 60 Hz) from the emergency shutoff switch to the boiler.
▶ Insert cable into the junction box as shown in Fig. 59.
▶ Connect cable to the white plug according to Fig. 58.
50 | Making the electrical connections

▶ Connect white plugs and insert grommet until stop.

Fig. 59  Cable connected (mains power supply)
▶ Mount junction box on the rail.

7.4 Connecting the LWCO device

**NOTICE:** System damage or malfunction!
▶ Ensure the air box remains air-tight when routing the LWCO cable to the outside.
▶ Do not route the LWCO cable through the ignition cable grommet as appliance malfunction may occur.

▶ Punch a hole (maximum diameter 3/16” (5 mm)) through the fan cable grommet (steps 1 – 3) and run the LWCO cable through it.

Fig. 60  Punch a hole in fan cable grommet for LWCO cable
▶ Install a 24VAC 20VA transformer near the boiler.
▶ Follow LWCO manufacturer’s instructions.
▶ Connect the lead labeled BOILER GROUND (green) to pin 2 (center, Fig. 58 [2]) of the white plug in the boiler junction box.
▶ Connect the leads labeled SWITCH CONTACT (yellow) to the TB1 temperature guard (Fig 49, page 47) on the Heatronic.

Fig. 61  Wires of a LWCO device with LWCO adapter
[1] LWCO device (Hydrolevel Safgard 1100)
[2] BOILER GROUND (green)
[3] SWITCH CONTACT (yellow)
[4] SWITCH CONTACT (yellow)
[5] 24V HOT (red)
[6] 24V COMMON (white)

▶ Connect the leads labeled SWITCH CONTACT (yellow) to the TB1 temperature guard (Fig 49, page 47) on the Heatronic.

Fig. 61  Wires of a LWCO device with LWCO adapter

**NOTICE:** System damage or malfunction!
▶ Ensure the air box remains air-tight when routing the LWCO cable to the outside.
▶ Do not route the LWCO cable through the ignition cable grommet as appliance malfunction may occur.
8 Commissioning

Fig. 62 Overview of the controls

1. Emissions test button
2. Service button
3. Burner operation indicator lamp
4. ON/OFF power switch
5. Key pad lock
6. ECO button
7. Reset button
8. Display
9. Automatic air vent (ZWB..-3A combi boilers only)
10. Boiler water pressure gauge
11. DHW thermostat
12. Safety relief valve discharge hose
13. Condensate drain hose
14. Heating return pipe
15. Cold water pipe (ZWB..-3A combi boilers only)
16. Gas pipe
17. DHW pipe (ZWB..-3A combi boilers only)
18. Supply pipe
19. Boiler high limit dial

8.1 Before operating the appliance

**NOTICE:** Commissioning without being properly filled and purged will damage the appliance.
- Only operate this appliance after ensuring there is sufficient water in the boiler and the system.

- Adjust the expansion vessel pre-charge pressure to the static head of the heating system (→ page 33).
- Open radiator and zone valves (as applicable).
- Open heating supply and return valves, fill heating system to 14.5 to 21.75 psi (1 - 1.5 bar) and close fill valve.
- Bleed all air from the system.
- If the boiler water pressure has dropped, fill the heating system again to 14.5 to 21.75 psi (1 to 1.5 bar).
- On ZBR..-3A appliances (heating boilers) with a DHW tank, open the cold water supply and open a DHW tap until water runs out.
- Verify that the gas type specified on the rating plate is the same as the gas type used.
- Open the gas cock.
8.2 Switching the appliance ON/OFF

Startup

▶ Switch the appliance ON using the ON/OFF switch. The display indicates the supply temperature of the hot water in °F. If necessary, convert to °C (Service function 0.E: Metric or US customary units, page 62)

![Switching the appliance ON/OFF](image)

When the appliance is switched ON for the first time, it performs a once-only purging sequence. This involves the heating zone pump switching on and off at intervals (for approx. 4 minutes). The display shows 🌡️ in alternation with the supply temperature.

▶ Open the automatic vent [9] (only combi boiler ZWB..-3A) and close it again when the purging sequence has finished (page 51).

If the display shows 🌡️ in alternation with the supply temperature, the trap filling function is active (page 61).

Shutdown

▶ Switch appliance OFF using the ON/OFF switch. The display goes out.

▶ If the appliance is taken out of service for a longer period: Observe frost protection (Section 8.9).

8.3 Setting up space heating

Set the maximum supply temperature based on the structure’s heat loss on design day.

<table>
<thead>

</tr>
</tbody>
</table>

Table 25 Typical supply temperatures

With radiant floor heating, limit the maximum permissible supply temperature as recommended by the manufacturer.

▶ In order to set the maximum supply temperature, turn the boiler high limit dial 🔄.

![Switch on heat](image)

If the burner is operating, the burner operation indicator lamp is illuminated.

8.4 Programming the Bosch Room Controller

Observe the operating instructions for the Bosch room controller included in the scope of delivery. There you can read:

▶ How to set the operating mode
▶ How to adjust the room temperature
▶ How to heat economically and comfortably
▶ How the control can be mounted in the living space

![Controls of the CRC200 controller](image)
After commissioning

- Check flue path for tightness.
- Check gas supply dynamic pressure (→ page 66).
- Check that condensate is being discharged from the condensate hose. If that is not the case, switch the appliance first OFF and then ON again using the ON/OFF switch. That activates the trap filling sequence (→ page 61). Repeat the procedure several times until condensate starts running out.
- Complete commissioning report (→ page 79).
8.6 ZBR..-3A appliances (heating boilers) with DHW tank:
Setting the DHW temperature

▶ Set the DHW temperature on the DHW thermostat.
The set DHW temperature flashes on the display for 30 seconds.

Fig. 66 Set the DHW temperature (heating boiler ZBR..-3A)

<table>
<thead>
<tr>
<th>DHW thermostat</th>
<th>Typical DHW temperatures</th>
</tr>
</thead>
<tbody>
<tr>
<td>min</td>
<td>approx. 59 °F (15 °C)</td>
</tr>
<tr>
<td>e</td>
<td>approx. 131 °F (55 °C)</td>
</tr>
<tr>
<td>max</td>
<td>approx. 158 °F (70 °C)</td>
</tr>
</tbody>
</table>

Table 27 Typical DHW temperatures for heating boiler ZBR..-3A

**WARNING:** Danger of scalding!
▶ In normal operation, it is recommended to limit the DHW temperature to 122 °F (50 °C) to limit the risk of scalding.
▶ Install a tempering valve if running DHW temperatures above 104 °F (40 °C).
▶ Only use temperatures up to 158 °F (70 °C) for thermal disinfection (→ page 55).

If there is reason for concern for contamination from bacteria such as legionella, consider setting the DHW thermostat to at least “e” (131 °F (55 °C)). This setting ensures an economical and comfortable DHW generation. Consult your local water department or municipality for further information.

**ECO button**
The default setting is DHW priority; the ECO button is not lit.
In order to switch between **DHW tank priority** and **alternating operation**, press the ECO button.

- **DHW priority**
  First, the DHW tank is heated up to the set temperature. The appliance then goes into heating mode. Therefore, it can happen that space heating is interrupted for a while and the room temperature may drop.
  DHW tank priority guarantees highest DHW comfort.
- **Alternating operation**
  The appliance switches between space heating mode and DHW mode. This prevents the room from cooling off too much.
  Alternating operation guarantees an even room temperature with somewhat less DHW convenience.

8.7 ZWB..-3A appliances (combi boilers):
Setting the DHW temperature

▶ Set the DHW temperature on the DHW thermostat.
The set DHW temperature flashes on the display for 30 seconds.

Fig. 67 Set the DHW temperature (combi boiler ZWB..-3A)

<table>
<thead>
<tr>
<th>DHW thermostat</th>
<th>Typical DHW temperatures</th>
</tr>
</thead>
<tbody>
<tr>
<td>min</td>
<td>approx. 104 °F (40 °C)</td>
</tr>
<tr>
<td>e</td>
<td>approx. 122 °F (50 °C)</td>
</tr>
<tr>
<td>max</td>
<td>approx. 140 °F (60 °C)</td>
</tr>
</tbody>
</table>

Table 28 Typical DHW temperatures for combi boiler ZWB..-3A

**ECO button**
Pressing and holding the ECO button until it lights up switches between **Comfort mode** and **Economy mode**.
  - **Comfort mode** (default setting)
    The appliance is continually maintained at the set temperature. Consequently, DHW draws are immediate, however the appliance may run even if no DHW is being drawn.
  - **Economy mode, ECO button lights up**
    – DHW is only generated when DHW is drawn.
    – **On demand**: Quickly open and close a DHW tap to signal the appliance to heat to the selected temperature. After a short wait DHW will be available.

The DHW on demand signal allows maximum gas and water savings.

8.8 Setting manual summer mode

In summer mode or warm weather shut down (WWSD), the heating zone pump and consequently central heating are switched off. DHW generation remains active following the DHW program.

**NOTICE:** Heating system at risk of freezing. In manual summer mode, only the appliance is protected from freezing.
▶ Observe frost protection measures where there is a risk of frost (→ Chapter 8.9).
▶ Make a note of the setting of the boiler high limit dial ノ.
Turn the boiler high limit dial \( \text{counterclockwise to } \) \( \text{min} \) .

Fig. 68 Summer mode

For further information, see the operating instructions for the heating control included in the scope of delivery.

8.9 Setting frost protection

Frost protection of the heating system:

\( \uparrow \) Leave the appliance switched ON; set the boiler high limit to at least 95 °F (35 °C) (position 1, \( \rightarrow \) Tab. 25, page 52).

\( \text{-or-} \) If you want to leave the appliance switched OFF:

\( \uparrow \) Mix Bosch-approved anti-freeze into the heating water (\( \rightarrow \) Tab. 14, page 32) and drain the DHW circuit.

Fig. 69 Frost protection of the heating system

For further information, see the operating instructions for the heating control included in the scope of delivery.

Frost protection of the DHW tank:

\( \uparrow \) Leave the appliance switched ON; set the boiler high limit to at least 95 °F (35 °C) (position 1, \( \rightarrow \) Tab. 25, page 52).

\( \uparrow \) Turn the DHW thermostat \( \text{counterclockwise to } \text{min} \) (59 °F (15 °C)).

Fig. 70 Frost protection for the DHW tank

8.10 Activating the key pad lock

The key pad lock affects the boiler high limit dial, the DHW thermostat, and all buttons except the ON/OFF switch, emissions test button, and reset button. It can be used to limit unauthorized access to the boiler.

Activating the key pad lock:

\( \uparrow \) Press the key pad lock button until \( \text{and the heating supply temperature are alternating on the display.} \)

Fig. 71 Key pad lock

Unlocking the key pad:

\( \uparrow \) Press the key pad lock button until the display shows only the supply temperature.

9 ZBR..-3A appliances (heating boiler) with DHW tank: Thermal disinfection

Thermal disinfection covers the DHW system including the taps. For solar DHW tanks, the solar portion of the tank is not covered.

\( \text{WARNING: Risk of scalding!} \)

Hot water can result in severe scalding.

\( \uparrow \) Carry out thermal disinfection only outside the normal hours of use, or install a tempering valve.

\( \uparrow \) Close all DHW taps.

\( \uparrow \) Advise occupants of the risk of scalding if no tempering valve is installed.

\( \uparrow \) Set the time and DHW temperature accordingly on the heating control with DHW program.

\( \uparrow \) Set any DHW recirculation pump to continuous operation.

\( \uparrow \) Turn DHW thermostat clockwise to \( \text{max} \) (approx. 158 °F (70 °C)).

Fig. 72 Thermal disinfection

\( \uparrow \) Wait until the maximum temperature has been reached.

\( \uparrow \) Open all DHW taps, from the nearest to the one furthest away, and draw off hot water until it reaches a minimum of 158 °F (70 °C) at all taps for at least 3 minutes.

\( \uparrow \) Reset the DHW thermostat, DHW recirculation pump, and heating control to standard operation.

\( \text{i} \)

Thermal disinfection can also be carried out automatically and on a regular basis; see operating instructions for the heating control included in the scope of delivery.
10 Boiler circulator

10.1 Pump anti-seize protection

This function prevents the heating zone pump from seizing up following longer idle periods.

The appliance will briefly run the pump at least every 24 hours after its last activation.

10.2 Changing the pump curve of the boiler pump

The speed of the boiler pump can be changed using the dial on the pump.

---

**Fig. 73** Pump curve of the boiler pump heating boiler
ZBR..-3A

**Fig. 74** Pump curve of the boiler pump combi boiler
ZWB..-3A

**Key to Fig. 73 and Fig. 74:**

- [1] Residual head pressure at speed 1
- [2] Residual head pressure at speed 2
- [3] Residual head pressure at speed 3 (default setting)
- [4] Head pressure of the boiler pump by itself (at speed 3)

**In order to save as much energy as possible and keep any water circulation noises to a minimum, select the lowest possible pump speed.**
11 Heatronic boiler control settings

11.1 Guideline to service functions
The Heatronic allows easy setting and testing of many appliance functions.
For an overview of service functions, see Chapter 11.2 on page 57.

Fig. 75 Overview of the controls
[1] Emissions test button
[2] Service button
[3] Display
[4] ECO button, service functions “up”
[5] Key pad lock, service functions “down”

Selecting a service function
The service functions are subdivided into two levels: The 1st level includes service functions up to 0.E, the 2nd level includes service functions starting with 8.A.
► Press and hold the service button  until it illuminates.
The display shows a code such as 1.A (first service level).
► Repeatedly press the key pad lock button or ECO button to scroll to the desired service function.
► Press and release the emissions test button . The emissions test button will light up and the display shows the setting for the selected service function.

Adjust Value
► Repeatedly press the key pad lock button or ECO button to adjust the value up or down.
► Record the value in the commissioning log ( page 79).

Saving the value
► Press and hold the emissions test button  until the display shows (value saved).

The unit automatically exits the service level if no button is pressed for 15 minutes.

Exiting the service function without saving values
► Briefly press the emissions test button . The light of the emissions test button will go out.

Restoring factory settings
In order to reset all values for the service levels 1 and 2 to the factory setting:
► Press and hold the service button until it illuminates. The display shows a code such as 1.A (first service level). Press the ECO button and key pad lock button simultaneously until the code 8.A appears (second service level).
► On the second service level, select the service function 8.E and value 00. The appliance restarts with the default settings.

11.2 Overview of the service functions

11.2.1 First service level (press and hold the service button until it lights up)

Table 30 Service functions, 2nd level

11.3 Description of the service functions

11.3.1 First service level

Service function 1.A: Maximum space heating output

Some gas supply companies offer a performance-dependent basic price. The output can be limited in percent between the minimum and maximum nominal output to suit the specific heat demand.

▶ Select service function 1.A.
▶ Select heat output in MBH (kW) and determine the associated setting in percent (%).
▶ Enter the setting (→ 11.1).
▶ Save the setting (→ 11.1).
▶ Record the set heat output in the commissioning log (→ page 79).
▶ Exit the service functions.

The display returns to the supply temperature.

**Default setting** is the maximum nominal output: **100** (100 %).

Service function 1.b: Maximum DHW output

The hot water output can be adjusted between the minimum and maximum DHW outputs to suit the heat transfer capacity of the DHW tank coil.

▶ Select service function 1.b.
▶ Select the DHW output in MBH (kW) and determine the associated setting in percent (%).
▶ Enter the setting (→ 11.1).
▶ Save the setting (→ 11.1).
▶ Record the set DHW output in the commissioning log (→ page 79).
▶ Exit the service functions.

The display returns to the supply temperature.

**Default setting** is the maximum nominal output: **100** (100 %).

Service function 1.E: Pump mode for space heating operation

If an temperature sensor for an outdoor reset control is connected, pump control mode 04 is automatically set.

- **Pump control mode 00 (automatic mode):** The BUS control controls the central heating pump.
- **Pump control mode 01:** For heating systems without control. The supply temperature controls the central heating pump. When there is a demand for heat, the central heating pump and the burner start up.
- **Pump control mode 02:** Do not use.
- **Pump control mode 03:** The central heating pump runs continuously (exceptions: See heating control operating instructions).
- **Pump control mode 04:** Intelligent control of central heating pump in heating systems with outdoor reset control. The heating zone pump is only switched on when needed.

**Default setting** is **00**.

Service function 1. F: Pump mode (only heating boiler ZBR..-3A)

**NOTICE:** System damage or boiler malfunction!
▶ Never change the setting of this service function on combi boiler ZWB..-3A appliances.

Based on this setting, the pump connected to the Heatronic or 3-way valve are controlled according to the configuration of the heating system.

The following settings are possible:
- **Pump mode 00:** The appliance is used only as central heating boiler.
- **Pump mode 01:** A 3-way valve for DHW tank loading is connected in boiler circuit before low loss header (see also service function 2.A).
- **Pump mode 02:** Do not use this setting!
- **Pump mode 03:** A DHW tank pump is connected on the system side after the low loss header.
  - In DHW mode, DHW tank loading pump runs.
  - In space heating mode, DHW tank loading pump does not run.

**Default setting** is **03**.
Service function 2.A: Heating circuit pump lockout time (only heating boiler ZBR..-3A)

This setting is only active if Service function 1.F: Pump mode is set to 01 (3-way valve).

During the runtime of an external 3-way valve actuator, the space heating pump is blocked. Select the run time of the 3-way valve actuator between 01 - 24 (10 - 240) seconds according to the manufacturer's documentation.

Default setting is 24 (240 seconds).

Service function 2.b: Maximum supply temperature

The values of this service function displayed depend on the setting of the service function 0.E:

Service function 0.E is set to 00 (metric units):
- The maximum supply temperature can be adjusted between 35 and 88 (35 - 88 °C).

Service function 0.E is set to 01 (US customary units):
- The maximum supply temperature can be adjusted between 96 and 190 (96 - 190 °F).

Default setting is 190 (190 °F (88 °C)).

Service function 2.C: Purging function

When the appliance is switched ON for the first time, it performs a once-only purging sequence. This involves the heating zone pump switching on and off at intervals (for approx. 4 minutes). The display shows $\mathcal{Q}$ in alternation with the supply temperature.

This service function allows activating the purging function manually, e.g. after servicing.

The following settings are possible:
- 00: Purging function off
- 01: Purging function is switched on and after completion automatically reset to 00
- 02: Purging function is permanently on and is not reset to 00

Default setting is 00 for heating boilers ZBR..-3A appliances, otherwise 01.

Service function 2.d: Thermal disinfection (legionella protection)

WARNING: Risk of scalding! Hot water can result in severe scalding.
- Carry out thermal disinfection only outside the normal hours of use.
- Install a tempering valve if this function is enabled permanently.

When this service function is enabled, the DHW is permanently heated to approx. 158 °F (70 °C) if the DHW temperature dial has been turned clockwise to max.

The following settings are possible:
- 00: Thermal disinfection not enabled
- 01: Thermal disinfection enabled

Default setting is 00 (disabled).

Service function 2.F: Operating mode

With this service function, you can temporarily change the appliance's operating mode.

The following settings are possible:
- 00: Default mode; the appliance runs according to control settings.
- 01: The appliance runs for 15 minutes at minimum output. The display shows 2.F. When this service function is aborted or has been active for 15 minutes, the appliance reverts to default mode.
- 02: The appliance runs for 15 minutes at maximum output. The display shows 2.F. When this service function is aborted or has been active for 15 minutes, the appliance reverts to default mode.

Default setting is 00.

Service function 3.A: Automatic anti-cycle function

If an outdoor reset control is connected, there is no need to adjust this setting on the appliance. The control automatically optimizes the anti-cycle time.

Use service function 3.A to set the automatic adaptation of the anti-cycle time. This can be required in case of unfavorably-dimensioned heating systems. Short cycling may increase boiler and system wear and tear, increase emissions, reduce comfort, and should be avoided.

With auto-adaptation of the anti-cycle time disabled, the anti-cycle time must be set using service function 3.b (→ page 60).

The following settings are available:
- 00: Automatic adaptation of the anti-cycle time is disabled
- 01: Automatic adaptation of the anti-cycle time is enabled

Default setting is 00 (switched off).
Service function 3.b: Set anti-cycle time
Only if the automatic anti-cycle time is disabled (service function 3.A) will this function be active.

The anti-cycle time can be set from 00 to 15 (0 to 15 minutes).
With 00, the anti-cycle lock is switched off.
The shortest possible switching interval is 1 minute (recommended for single zone or forced air heating systems).
Default setting is 03.

Service function 3.C: Switching differential
Only if the automatic anti-cycle time is disabled (service function 3.A) will this function be active.

The switching differential is the permitted boiler differential from the target supply temperature. It can be set in increments of 1 °F (0.5 °C).
The minimum supply temperature is 95 °F (35 °C).
Service function 0.E is set to 00 (metric units):
• You can set the switching differential between 00 and 30 (0 - 30 °C).
Service function 0.E is set to 01 (US-customary units):
• You can set the switching differential between 00 and 54 (0 - 54 °F).
Default setting is 18 (18 °F (10 °C)).

Service function 3.d: Minimum output (heating and DHW)
The output for heating and DHW can be set to any level in percent between the minimum and maximum nominal output.
The default setting is the minimum nominal output (heating and DHW) and varies according to appliance.

NOTICE: System damage or boiler malfunction!
Never change the setting of this service function on heating boiler ZBR..-3A appliances.

Service function 3.E: Cycle time, keeping DHW hot (only combi boiler ZWB..-3A)
This service function is only active in comfort mode.
It specifies the time from completion of preheating or DHW demand until the next time the plate-type heat exchanger is heated up. This prevents the plate-type heat exchanger from overheating.
The cycle time can be set from 20 to 60 minutes.
Default setting is 20 (20 minutes).

Service function 3.F: Constant DHW period (only combi boiler ZWB..-3A)
The constant DHW period specifies how long the space heating mode remains disabled after DHW is drawn.
The duration for keeping DHW hot can be set from 00 to 30 (0 to 30 minutes).
Default setting is 01 (1 minute).

Service function 4.b: Maximum heat exchanger temperature (only combi boiler ZWB..-3A)
This function can be used to reduce limestone built-up in the heat exchanger, which increases with temperature. The maximum heat exchanger temperature can be set in steps of 1 °F (0.5 °C).
Service function 0.E is set to 00 (metric units):
• The maximum temperature for keeping the heat exchanger hot can be set from 40 to 65 (40 to 65 °C).
Service function 0.E is set to 01 (US-customary units):
• The maximum temperature for keeping the heat exchanger hot can be set from 104 to 150 (104 to 150 °F).
Default setting is 140 (140 °F (60 °C)).

Service function 4.d: Audible fault warning tone
The appliance can be set to sound an audible alarm to alert the operator of a fault present. The audible warning tone can be deactivated with the service function 4.d.
• 00: Warning tone off
• 01: Warning tone on
Default setting is 01 (ON).

Service function 4.E: Appliance type
This service function displays the appliance type detected.
Possible displays are:
• 00: Central heating only
• 01: Combi appliance
• 02: DHW tank temperature sensor (NTC) connected to Heatronic.
• 03: DHW tank thermostat connected to Heatronic.
• 04: Stratified DHW tank
• 05: Tank with NTC return
Service function 4.F: Condensate trap filling sequence

DANGER: Risk of flue gas poisoning!
If the condensate trap is not filled, flue gas may escape from the dry trap.
- Only deactivate the trap filling sequence for servicing purposes.
- When servicing is complete, reactivate the trap filling function.

The trap filling sequence ensures that the condensate trap is filled after initial installation or after a longer downtime of the appliance.

The trap filling sequence is activated if:
- The appliance is switched OFF using the ON/OFF switch
- The burner has not been in use for at least 28 days
- You are switching between summer and winter mode

The next time there is a demand for heat in central heating or hot water mode, the appliance is held at low output for 15 minutes. The trap filling sequence remains active until the appliance has completed 15 minutes of operation at low output. The display shows - - in alternation with the supply temperature.

The following settings are available:
- 00: Condensate trap filling sequence is off.
- 01: Trap filling program at the lowest output.
- 02: Trap filling sequence at set minimum output.

Default setting is 01.

Service function 5.A: Reset inspection interval

This function enables resetting the indication \( \text{S} \) on the display after completing inspection/servicing of the appliance.

Default setting 00.

Service function 5.b: Fan post purge time

This service function allows setting the time the fan purges after the burner is shut off.
The post purge time can be set from 01 to 18 (10 - 180 seconds).

Default setting is 03 (30 seconds).

Service function 5.E: Functionality of black plug in boiler junction box

With this service function you can set the functionality of the black plug in the boiler junction box (\( \rightarrow \) page 49).

The following settings are possible:
- 00: Off - black connector in junction box is disabled (120VAC output deactivated).
- 01: DHW recirculation pump enabled - See Bosch room controller instructions on how to set a recirculation pump program.
- 02: External heating zone pump in heating circuit without 3-way valve.
- 03: External heating zone pump in heating circuit without mixer controlled by Heatronic running in parallel with boiler pump in central heating mode

Default setting is 03.

Service function 5.F: Set inspection interval

This service function allows setting the number of months after which the 'service due' reminder \( \text{s} \) appears on the display alternating with the supply temperature.
The number of months can be set from 00 - 72 (0 to 72 months).

Default setting is 00 (disabled).

Service function 6.A: Display the latest fault code

Use this service function to display the most recent fault code.

Service function 6.b: Room temperature control, current voltage, terminal 2

The current voltage of the analog control at terminal 2 is displayed, if an external 24-V-room temperature controller is connected.
Possible displays are:
- 00 - 24: 0 V to 24 V in increments of 1 V

Service function 6.C: Supply temperature required by outdoor reset control

This service function allows displaying the current target supply temperature set by the outdoor reset control.

Service function 6.d: Current DHW turbine flow rate (only combi boiler ZWB..-3A)

The current flow rate of the DHW turbine is displayed.

Service function 0.E is set to 00 (metric units):
- 0.0. - 99.9.: 0.0 to 99 l/min in increments of 0.1 l/min

Service function 0.E is set to 01 (US-customary units):
- 0.0. - 99.9.: 0.0 to 99 gpm in increments of 0.1 gpm

Service function 7.A: Indicator lamp for burner operation / faults

With this service function you can activate and deactivate the indicator lamp for burner operation (continuously illuminated) and faults (flashing).

The following settings are possible:
- 00: Off
- 01: On (burner operation) and flashing (fault present)

Default setting is 00.
Service function 7.b: 3-way valve in center position
After the value 01 has been saved, the 3-way valve moves to the center position. This allows draining the system completely and removing the motor easily.
When you exit this service function, the appliance returns to setting 00.

Service function 7.d: Connecting an external supply or low-loss header temperature sensor
Presence of an external supply or low loss header temperature sensor is automatically detected by default; you do not need to change any settings.

If a sensor is disconnected, change the setting back to the default setting 00.

The following settings are available:
- 00: Once-only automatic detection of a sensor
- 01: External supply temperature sensor connected to Heatronic.
- 02: External supply temperature sensor connected to CZM100.
Default setting is 00.

Service function 7.E: Building drying function
This service function allows you to start and stop the building drying function.

When the building drying function is on, you cannot adjust the appliance gas settings.

The following settings are available:
- 00: Off
- 01: Heating operation only in accordance with the appliance or control setting, i.e. all other heat demands are blocked.
Default setting is 00.

Service function 0.A: Do not use this setting!
Default setting is 00 (disabled).

Service function 0.d: Altitude adjustment
Input and output rates are reduced at higher altitudes due to thin air with reduced oxygen levels.
ZBR42-3A... and ZWB42-3A... appliances are derated at 3 % per 1000 feet (305 m).
ZBR16-3A..., ZBR21-3A..., ZBR28-3A..., ZBR35-3A..., ZWB28-3A... and ZWB35-3A... appliances offer altitude adjustment which compensates for the effects of thin air, and are therefore NOT derated up to 6000 feet (1829 m). Above 6000 feet (1829 m) a rate of 3 % per 1000 feet (305 m) applies.
This service function is used to adjust the fan speed for high altitude operation.
The following settings are available:
- 00: Normal
- 01: Medium
- 02: High
Default setting is 00.

Service function 0.E: Metric or US customary units
With this service function you can set if Metric or US customary units are displayed on the boiler.
The following settings are available:
- 00:  °C, l/min (metric units)
- 01:  °F, gpm (US-customary units)
Default setting is 01.

11.3.2 Second service level
Service function 8.A: Software version
The current software version is displayed.

Service function 8.b: Code plug number
The last four digits of the code plug number are shown. The code plug determines the appliance functions. If the appliance has been converted from natural gas to LPG (or vice versa), the code plug must be replaced.

Service function 8.C: GFA Gas burner control unit status
Internal parameter. If you are on the line with Bosch Technical Support you may be asked for this number.

Service function 8.d: GFA Gas burner control unit fault
Internal parameter.
Service function 8.E: Restore boiler to factory settings
This function allows resetting all parameters of the boiler including all service functions to their factory settings.
▶ Press and hold the service button until it illuminates.
The display shows a code such as 1.A (first service level).
▶ Press and hold ECO button and key pad lock button simultaneously until a service function, e.g. 8.A, is displayed (second service level).
▶ Repeatedly press the key pad lock button or ECO button until service function 8.E is displayed.
▶ Press and release the emissions test button .
The emissions test button lights up and the display shows 00.
▶ Press and hold the emissions test button until the display shows 00.
All settings are reset and the appliance restarts with the default settings.
▶ Reset altered service functions to the settings recorded in the commissioning log (page 79).

Service function 8.F: Permanent ignition
This function enables permanent ignition without gas supply to test the performance of all ignition related components.
The following settings are available:
• 00: Off
• 01: On
Default setting is 00.

Service function 9.A: Constant mode
This function sets one operating mode permanently (Service function 2.F: Operating mode, page 59).
The following settings are available:
• 00: Default mode: the appliance runs according to control settings.
• 01: The appliance runs permanently at minimum output. The display shows 9.A.
• 02: The appliance runs permanently at maximum output. The display shows 9.A.
Default setting is 00.

Service function 9.b: Current fan speed
This service function allows you to display the current fan speed in revolutions per second (1/s).

Service function 9.C: Current boiler output
This service function displays the current boiler output (in percent %).

Service function 9.d: Set fan start speed
At higher elevations the boiler fan may need to spin faster upon startup to ensure reliable ignition every time. The start speed of the boiler fan can be set from 45 to 77 revolutions per second (1/s).
Default setting is 50.

Service function 9.E: Turbine signal delay (only combi boiler ZWB..-3A)
This service function allows setting a time delay to prevent the appliance starting up as a result of transient pressure spikes in the water supply.
Through spontaneous pressure change in the water supply, the flow meter (turbine) can signal that DHW is being drawn and cause the burner to come on unnecessarily.
The turbine signal delay can be set from 02 to 08 (0.5 seconds to 2 seconds) in increments of 0.25 seconds.
Default setting is 04 (1 second).

Service function 9.F: Heating zone pump post purge
This service function allows setting a pump post purge time after the end of the heat demand from the external control.
The pump post purge time can be set from 01 to 10 (1 to 10 minutes).
Default setting is 03.

Service function A.b: Display DHW temperature
This service function allows displaying the current DHW temperature.

Service function A.C: Display DHW tank temperature
This service function allows displaying the temperature of the DHW tank temperature sensor.

Service function b.F: Solar DHW backup heating delay (only combi boiler ZWB..-3A)
For systems with a solar thermal DHW tank in series before the DHW line of the combi boiler. DHW heating by the boiler will be suppressed expecting that solar thermal DHW will reach the hot water temperature sensor prior eliminating the need to run the boiler. Set the heating delay in accordance with system conditions.
If this setting is enabled, the DHW demand signal is no longer available (page 54).

The start delay can be set between 00 to 50 (0 to 50 seconds) in increments of 1 second.
Default setting is 00.

Service function C.d: Display current heat demand
Available displays are:
• 00: No heat demand
• 01: Space heating demand present
• 02: DHW heat demand present
12 Gas type conversion

**DANGER:** Personal injury and property damage
- This conversion shall only be performed by a trained and certified installer in accordance with the manufacturer’s instructions and all applicable codes and requirements of the authority having jurisdiction.
- If the information in these instructions is not followed exactly, or the installation, adjustment, modification, operation or maintenance is carried out by an unqualified person, a fire, explosion or generation of large amounts of carbon monoxide may result causing property damage, personal injury or loss of life.
- Before carrying out electrical work: Disconnect the installation from the power supply at the emergency shutoff switch or by disengaging the heating system circuit breaker. Take measures to prevent accidental reconnection.
- The installer is responsible for the proper conversion of this appliance.
- The conversion is not complete until the operation of the converted appliance is checked as specified in these instructions.

The gas-air ratio must always be set on the basis of a CO₂ or O₂ reading taken at maximum nominal output and minimum nominal output using an electronic flue gas analyzer.

Adjustment to different flue systems using throttle discs or baffles is not necessary.

**NG**
- Appliances are set at the factory to Wobbe index 1,333 BTU/ft³ (49.6 MJ/m³) at 60 °F (15 °C), 30″ Hg (1016 hPa) and 7.0″ W.C. (17.4 mbar) gas supply pressure and sealed.

### 12.1 Converting to a different gas type

**DANGER:** Explosion!
- Close the gas cock prior to working on the gas train.
- Check for gas leaks after carrying out work on the gas train.

A gas conversion kit is included in the scope of delivery.
- Fold the Heatronic down.
- Check the number on the code plug from the gas conversion kit (Code plug number → table 44, page 78).

Replace the code plug in the Heatronic with the code plug from the gas conversion kit.

▶ Affix the gas type label from the gas conversion kit to the appliance.

**Fig. 76 Replacing the code plug**

**Fig. 77 Affixing the gas type label**

> Always adjust the gas-air ratio (CO₂ or O₂, → Section 12.3) after converting to a different gas type and measure the CO content of the flue gas (→ Section 13).

### 12.2 Installation location higher than 2,000 feet (610 m) above sea level

Input and output rates are reduced at higher altitudes due to thin air with reduced oxygen levels.

ZBR42-3A..., ZBR21-3A..., ZBR28-3A..., ZBR35-3A..., ZWB28-3A... and ZWB35-3A appliances offer altitude adjustment which compensates for the effects of thin air, and are therefore NOT derated up to 6000 feet (1829 m). Above 6000 feet (1829 m) a rate of 3% per 1000 feet (305 m) applies.

**i** The Bosch Greenstar boiler is factory set for installation below 2000 feet (610 m) above sea level.

> Correction of the fan speed curve of the burner: Use service function 0.d to adjust the elevation setting (→ page 62). 

**DANGER:** Explosion!
- Close the gas cock prior to working on the gas train.
- Check for gas leaks after carrying out work on the gas train.
12.3 Setting the gas-air ratio (CO₂ or O₂)

► Switch the appliance OFF using the ON/OFF switch.
► Remove the cover (→ page 36).
► Switch the appliance ON using the ON/OFF switch.
► Open one of the flue gas test ports.

Fig. 78 Open one of the flue gas test ports
► Insert the probe approx. 2-3/4 inches (70 mm) into the test port and seal around it.
► Press and hold the emissions test button until it lights up.
  The display shows the supply temperature alternating with = maximum set output in heating mode.
► Briefly press the emissions test button .
  The display shows the supply temperature in alternation with = maximum nominal output.
► Measure the CO₂ or O₂ level and the CO content of the flue gas (→ Section 13).
► On the gas throttle, break the seal at the slot and remove the cap.

Fig. 79 Remove seal from the gas throttle
► Adjust the gas throttle to match the CO₂ or O₂ level for maximum nominal output according to table 32.

Fig. 80 Set CO₂ or O₂ level for maximum nominal output

<table>
<thead>
<tr>
<th>Gas type</th>
<th>Maximum nominal output CO₂</th>
<th>Maximum nominal output O₂</th>
<th>Minimum nominal output CO₂</th>
<th>Minimum nominal output O₂</th>

<td>11.0%</td>
<td>4.2%</td>
<td>10.4%</td>
<td>5.1%</td>
</tr>
</tbody>
</table>

Table 32 CO₂ or O₂ values at maximum and minimum nominal output
► Briefly press the emissions test button .
  The display shows the supply temperature in alternation with = minimum nominal output.
► Measure the CO₂ or O₂ level and the CO content of the flue gas (→ Section 13).
► Remove the sealed screw (→ Fig. 81, [3]) from gas valve adjustment screw (→ Fig. 81, [2]) and set CO₂ or O₂ level for minimum nominal output.

Fig. 81 Set CO₂ or O₂ level for minimum nominal output
► Re-check settings at maximum and minimum nominal output and re-adjust if necessary.
► Repeatedly press the emissions test button until the light goes out.
  The display returns to the supply temperature.
► Record the CO₂ or O₂ levels and the CO content of the flue gas in the commissioning log.
► Reinstall the screw (→ Fig. 81, [3]) to cover the gas valve adjustment screw.
12.4 Dynamic gas pressure test

▶ Switch the appliance OFF and close the gas shut-off valve.
▶ Loosen the screw in the test port for gas inlet pressure (Fig. 81, [1]) and connect a pressure gauge (Fig. 83).

Fig. 83 Dynamic gas pressure test port

▶ Turn on the gas cock and switch the appliance ON.
▶ Press and hold the emissions test button until it lights up.
  The display shows the supply temperature alternating with = maximum set output in heating mode.
▶ Briefly press the emissions test button .
  The display shows the supply temperature in alternation with = maximum nominal output.
▶ Check the required inlet gas pressure according to table 33.

<table>
<thead>
<tr>
<th>Gas type</th>
<th>Nominal pressure &quot;W.C. (mbar)</th>
<th>Permissible pressure range for maximum nominal output &quot;W.C. (mbar)</th>

<td>8-13 (19.9-32.3)</td>
</tr>
</tbody>
</table>

Table 33 Inlet gas pressure

Do not operate the appliance if the measured value is below or above these values. Determine the cause and eliminate the fault. If this is not possible, block the appliance on the gas side and notify the gas supplier.

▶ Repeatedly press the emissions test button until the light goes out.
  The display returns to the supply temperature.
▶ Switch the appliance OFF, turn off the gas cock, remove the pressure gauge and tighten the screw in the test port for gas inlet pressure.
▶ Reinstall the cover.
13 Flue gas test

13.1 Emissions test button

The following appliance outputs can be selected by pressing the emissions test button \( \text{button} \) until it lights up:

- \( \text{max} = \text{Maximum set output in heating mode} \) (\( \rightarrow \text{Maximum heating output, page 58} \))
- \( \text{nom} = \text{Maximum nominal output} \)
- \( \text{min} = \text{Minimum nominal output} \)

You have 15 minutes to complete the tests. After that, the appliance returns to default mode.

13.2 Measuring CO content of flue gas

Use a multiport flue gas probe for the measurements.

- Open one of the flue gas test ports (\( \rightarrow \text{Fig. 78} \)).
- Insert the flue gas probe approx. 2-3/4 inches (70 mm) into the test port and seal around it.
- Press the emissions test button to select \( \text{max} = \text{maximum nominal output} \).
- Measure the CO levels.

**DANGER**: Risk of flue gas poisoning. The CO level in the flue gas must be below 200 ppm (air free).

- If 9.4 Vol.\%\(^1\) CO\(_2\) and a CO level under 200 ppm (af) can not be achieved due to the gas supplied, use a lower CO\(_2\) level with CO emissions under 200 ppm (af) instead.

\(1\) 9.4 Vol.\% with NG and 11.0 Vol.\% with LPG (propane)

- Repeatedly press the emissions test button \( \text{button} \) until the light goes out.
- The display returns to the supply temperature.
- Remove flue gas probe and close the flue gas test port properly (\( \rightarrow \text{Fig. 82} \)).

14 Environmental responsibility/disposal

Environmental responsibility is one of the fundamental company policies of the Bosch Group.

We regard quality of performance, economy and environmental responsibility as equal objectives. Environmental protection laws and regulations are strictly adhered to.

To protect the environment, we use the best possible technology and materials taking into account economic points of view.

Packaging

All packaging materials used are environmentally-friendly and recyclable.

Old appliances

Old appliances contain resources that must be submitted for recycling. The components are easy to separate and the plastics are marked. This allows the various components to be sorted for appropriate recycling or disposal.

15 Inspection and maintenance

Regular service and maintenance are recommended for a long service life of the appliance, for efficient and economical operation, and to keep the environmental impact as low as possible. Owners/operators are encouraged to sign a service and maintenance contract with a trained and certified installer for annual servicing and maintenance of the boiler.

**DANGER**: Explosion!

- Close the gas cock prior to working on the gas train.
- Check for gas leaks after carrying out work on the gas train.

**DANGER**: Risk of flue gas poisoning.

- Check for leaks after carrying out work on the venting system.

**DANGER**: Risk of electric shock!

- Always disconnect the appliance from the mains power before performing any work. Disconnect the emergency shutoff switch or disengage the heating system circuit breaker. Take measures to prevent accidental reconnection.

**NOTICE**: Insufficient antifreeze can accelerate corrosion.

- Frost protection level has to be checked annually during the regular scheduled maintenance of the condensing boiler.
Heat exchanger

**NOTICE:** Damage to the coating of the heat exchanger.
- Cleaning of the heat exchanger should not be necessary until five years after the initial commissioning.
- Only use a Bosch cleaning blade or Bosch cleaning brush.
- Only clean heat exchanger if soiling is clearly visible.

Heatronic boiler control

In case of a component defect, a fault is shown on the display. The Heatronic boiler control monitors all safety and control components.

**NOTICE:** The Heatronic boiler control can be damaged by leaking water.
- Cover the Heatronic prior to working on water filled components.

Notes on installation and operation

An overview of the faults can be found on page 75.

- The following analytical tools are needed for service and maintenance:
  - Electronic flue gas analyzer for CO₂, O₂, CO, and flue gas temperature
  - Pressure gauge 0 to 12 inches W.C. (0 to 30 mbar)
  - pH Test strips
  - Glycol tester of antifreeze is being used
- Special tools are not required.
- Approved lubricants are:
  - For parts touched by water: Unisilkon L 641 (part-# 8 709 918 413 0)
  - or fittings: HFT 1 v 5 (part-# 8 709 918 010 0).
  - Use part-# 8 719 918 658 0 as heat conducting paste.
  - Use only genuine Bosch spare parts.
  - Request spare parts.
  - Replace removed gaskets and O-rings with new ones.

After the inspection/maintenance

- Re-tighten all loosened threaded connections.
- Restart the appliance (page 51).
- Check all connections for leaks.
- Check the gas-air ratio and adjust if necessary (page 65).

15.1 Description of various steps

15.1.1 Calling up the latest fault (service function 6.A)

- Select service function 6.A (page 61).

An overview of the faults can be found on page 75.

15.1.2 Fresh water filter (only combi boiler ZWB..-3A)

- Close cold water tap.
- Depressurize the cold water pipe.
- To access the filter remove the safety clip (step 1), pull out the pipe (step 2), and remove the filter from the pipe (step 3).
- If necessary, clean with plastic brush under running water.

15.1.3 Plate type heat exchanger

(only combi boiler ZWB..-3A)

If the DHW output on the combi boiler is significantly reduced:
- Check filter in the cold water pipe for contamination (Fig. 68).
- Depressurize the appliance.
- Remove plate type heat exchanger and replace
  -or-
  - Descale with descaling agent approved for stainless steel (Grade 316-1.4401).

To remove the plate type heat exchanger:
- Unplug electrical connections.
- Remove hose from safety relief valve.
Inspection and maintenance

Loosen/remove pipe connections.

Remove the boiler pressure gauge from the Heatronic boiler control.

Loosen the quick releases (steps 1 and 2) and remove the hydraulic assembly in its entirety (step 3).

Remove the plate type heat exchanger.

Install new plate type heat exchanger with new gaskets and reconnect the hydraulic assembly in reverse order.

Check all connections used during maintenance for leaks.

15.1.4 Checking the electrodes

Remove electrode set (→ page 10 / 12) including gasket and check electrodes for contamination; clean or replace, if required.

Reinstall electrode set with new gaskets and check for leaks.

Check for leaks
15.1.5 Burner servicing

▶ Remove burner lid (steps 1 - 4).

▶ Remove burner and clean its components.

▶ Reinstall burner in reverse order, including a new gasket if necessary.

▶ Adjust the gas-air ratio (→ page 65).

DANGER: Fire danger!
➤ Only operate the burner while installed in a boiler.

15.1.6 Heat exchanger block inspection and cleaning

NOTICE: Damage to the coating of the heat exchanger.
➤ Cleaning of the heat exchanger should not be necessary until five years after the initial commissioning.
➤ Only use a Bosch cleaning blade and Bosch cleaning brush.
➤ Only clean heat exchanger in case if soiling is clearly visible.

➤ Remove the inspection cover (→ page 10) and any sheet metal insert below, if installed.

➤ Determine degree of soiling of the heat exchanger through visual inspection.

If mechanical cleaning is required:
For cleaning the heat exchanger, use Bosch main heat exchanger gaskets, the heat exchanger brush and the heat exchanger cleaning blade which are available as spare parts.
➤ Remove the condensate trap (steps 1 and 2) and place a suitable container underneath.

Fig. 93 Removing the burner cover
➤ Remove burner and clean its components.

Fig. 94 Burner
➤ Reinstall burner in reverse order, including a new gasket if necessary.
➤ Adjust the gas-air ratio (→ page 65).

Fig. 95 Removing the condensate trap

DANGER: Fire danger!
➤ Only operate the burner while installed in a boiler.

NOTICE: Damage to the coating of the heat exchanger.
➤ Cleaning of the heat exchanger should not be necessary until five years after the initial commissioning.
➤ Only use a Bosch cleaning blade and Bosch cleaning brush.
➤ Only clean heat exchanger in case if soiling is clearly visible.
With the cleaning blade, clean the heat exchanger block from the bottom to the top.

► Rinse the heat exchanger with water from the top.

Fig. 96 Cleaning the heat exchanger with the cleaning blade
► Clean the heat exchanger block with the brush from top to bottom.

Fig. 97 Cleaning the heat exchanger with the cleaning brush
► Remove burner (→ Chapter 15.1.5 “Burner servicing”).

Fig. 98 Rinsing the heat exchanger
► Clean the condensate tray (with reversed brush).

Fig. 99 Cleaning the condensate tray
► Rinse the heat exchanger with water from the top.
► Clean the condensate trap connection.
► Close the inspection opening again using a new gasket and tighten the screws with approx. 3.69 ft.-lbf. (5 Nm).
15.1.7 Condensate trap cleaning
▶ Remove condensate trap (steps 1 and 2) and check heat exchanger orifice for clear passage.

Fig. 100  Removing the condensate trap
▶ Remove and clean the condensate trap lid.
▶ Check condensate hose and clean if necessary.
▶ Fill the condensate trap with approx. 1 cup (1/4 l) of water and reinstall it.

15.1.8 Checking the mixer diaphragm
▶ Open the mixer unit.
▶ Carefully remove the diaphragm from the fan air intake and check for contamination and cracks.

Fig. 101  Opening the mixer unit
▶ Insert the diaphragm into the fan connector. Ensure the diaphragm is oriented properly.

The diaphragm flaps must open upwards.
▶ Close the mixer unit.

15.1.9 Expansion vessel
Annual inspection of the expansion vessel is required.
▶ Depressurize the appliance.
▶ If necessary, adjust the expansion vessel pre-charge pressure to the static head of the heating system (page 33).

15.1.10 Setting the boiler water pressure
▶ If the indicator is below 14.5 psi (1 bar) when the system is cold, top up the water. The indicator must be between 14.5 psi (1 bar) and 21.75 psi (1.5 bar).
▶ If the pressure is not held, check the expansion vessel and heating system for leaks.

15.1.11 Testing system water quality
▶ Take a representative sample of the system water and analyze pH using a pH meter or pH test strips.

Table 35  Water preparation for filling and maintaining the heating system (pH-value)

▶ If the value is outside of the permitted range, drain the system, flush, and refill with fresh water to prevent system damage or leaks.
▶ If the fill water does not meet the requirements of page 32, treat the water to bring it within the permissible range.
▶ If antifreeze is being used in the system, check the frost protection properties to ensure the site specific requirements are met.

15.1.12 Inspecting electrical wiring
▶ Check electrical wiring for mechanical damage and replace defective cables.
### 15.2 Checklist for inspection and maintenance

Use this form to guide you through the service and maintenance procedure. Fill out each step according to the findings and work performed.

| Date | Latest fault code from service function | Fresh water inlet filter (Combi boiler ZWB appliances only) | Visual inspection of the combustion air pipes and vent pipes. | Dynamic gas pressure | Gas-air ratio at min./max. nominal output | Gas and water-side leak test | Inspect electrodes | Inspect heat exchanger block | Check burner | Inspect diaphragm in mixer unit | Clean condensate trap | With the system depressurized, check the expansion vessel pre-charge pressure vs. the static head of the heating system | Check the heating system filling pressure. | Inspect electrical wiring for damage. | Check settings of the heating control. | Check set service functions according to commissioning report |
|------|------------------------------------------|---------------------------------------------------------------|---------------------------------------------------------------|---------------------|------------------------------------------|----------------------------|-------------------|--------------------------|---------------|-----------------------------|----------------|--------------------------------------------------------------------------------|----------------|---------------------------------|------------------|---------------------------------|------------------|
| 1    | Date                                    |  page 68                                                    |                                                               |                     | inches W.C. (mbar)                       |                            |                   |                          |               |                             |                | psi (bar)                                                                     | psi (bar)       |                                |                   |                                |                   |
| 2    | Date                                    |                                                               |                                                               |                     | min. %                                   | max. %                     |                   |                          |               |                             |                |                                                                              |                |                                |                   |                                |                   |
| 3    | Date                                    |                                                               |                                                               |                     |                                        |                            |                   |                          |               |                             |                |                                                                              |                |                                |                   |                                |                   |
| 4    | Date                                    |                                                               |                                                               |                     |                                        |                            |                   |                          |               |                             |                |                                                                              |                |                                |                   |                                |                   |
| 5    | Date                                    |                                                               |                                                               |                     |                                        |                            |                   |                          |               |                             |                |                                                                              |                |                                |                   |                                |                   |
| 6    | Date                                    |                                                               |                                                               |                     |                                        |                            |                   |                          |               |                             |                |                                                                              |                |                                |                   |                                |                   |

*Table 36 Maintenance and inspection checklist*
16 Readings on the display
The boiler display can provide the following information (Tab. 37 and 38):

<table>
<thead>
<tr>
<th>Value displayed</th>
<th>Description</th>
<th>Range</th>
</tr>
</thead>
<tbody>
<tr>
<td>Number or letter, dot followed by letter</td>
<td>Service function (→ Tab. 29 / 30, page 57)</td>
<td></td>
</tr>
<tr>
<td>Letter followed by number or letter</td>
<td>Fault code (→ Tab. 39, page 75) (exception: b.A = service function)</td>
<td></td>
</tr>
<tr>
<td>Three numbers (≤ 199)</td>
<td>Decimal value, e.g. supply temperature</td>
<td>00..199</td>
</tr>
<tr>
<td>One number (displayed for longer) followed by two numbers (displayed briefly)</td>
<td>Decimal figure (three digits); first digit is shown alternating with two last digits (e.g. 2.69..69 for 269)</td>
<td>0..999</td>
</tr>
<tr>
<td>Two dashes followed by two pairs of numbers</td>
<td>Code is shown in three stages: 1. Two dashes 2. First two digits 3. Last two digits (e.g. 10 04)</td>
<td>1000..9999</td>
</tr>
<tr>
<td>Two letters followed by two pairs of numbers</td>
<td>Code is shown in three stages: 1. Two letters 2. First two digits 3. Last two digits (e.g. CF 10 20)</td>
<td></td>
</tr>
</tbody>
</table>

Table 37 Display readings

<table>
<thead>
<tr>
<th>Status code</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Acknowledge by pressing any button (except reset).</td>
</tr>
<tr>
<td></td>
<td>Acknowledge by pressing two buttons simultaneously</td>
</tr>
<tr>
<td></td>
<td>Acknowledge by pressing and holding for more than 3 seconds (Save function).</td>
</tr>
<tr>
<td></td>
<td>The display shows the supply temperature in alternation with . The appliance works for 15 minutes at the minimum nominal output, → service function 2.F.</td>
</tr>
<tr>
<td></td>
<td>The display shows the supply temperature in alternation with . The appliance works with the set maximum output in heating mode, → service function 1.A.</td>
</tr>
<tr>
<td></td>
<td>The display shows the supply temperature in alternation with . The appliance works for 15 minutes at the maximum nominal output, → service function 2.F.</td>
</tr>
<tr>
<td></td>
<td>The air purging function is active, → service function 2.C</td>
</tr>
<tr>
<td></td>
<td>The display shows the supply temperature in alternation with . The trap filling sequence is active, → service function 4.F.</td>
</tr>
<tr>
<td></td>
<td>The display shows the supply temperature alternating with . Service reminder, → service function 5.A.</td>
</tr>

Table 38 Special displays

17 Faults

17.1 Troubleshooting

DANGER: Explosion!
▶ Close the gas cock prior to working on the gas train.
▶ Check for gas leaks after carrying out work on the gas train.

DANGER: Risk of flue gas poisoning.
▶ Check for leaks after carrying out work on the venting system.

DANGER: Risk of electric shock!
▶ Always disconnect the appliance from the mains power before performing any work. Disconnect the emergency shutoff switch or disengage the heating system circuit breaker. Take measures to prevent accidental reconnection.

WARNING: Danger of scalding!
Hot water can scald.
▶ Drain the appliance before working on components that are water filled.

NOTICE: The Heatronic boiler control can be damaged by leaking water.
▶ Cover the Heatronic prior to work on water filled components.

The Heatronic boiler control monitors all safety and control components.
If a fault arises during operation, an audible warning tone sounds.

Press a button to mute the warning sound.
The display indicates a fault code (e.g. A7) and the reset button flashes.
If the reset button is flashing:
▶ Press the reset button and hold it until \(\text{\textdegree}\) appears on the display.
  The appliance starts up again and the current supply temperature is displayed.
If the reset button is not flashing:
▶ Switch the appliance OFF and ON again.
  The appliance starts up again and the current supply temperature is displayed.

### 17.2 Faults that are shown on the display

<table>
<thead>
<tr>
<th>Display</th>
<th>Description</th>
<th>Elimination</th>
</tr>
</thead>
</table>
| A7 | DHW temperature sensor defective. | ▶ Check temperature sensor and leads for interruptions or shorts, and replace if defective.  
  ▶ Insert code plug correctly; replace if defective. |
| A8 | Communication fault. | ▶ Check BUS communications wiring, replace if defective.  
  ▶ Check control, replace if defective. |
| Ad | DHW tank temperature not detected. | ▶ Check DHW tank temperature sensor and connecting lead, replace if defective.  
  ▶ Reset the boiler to the factory default settings (\(\Rightarrow\) service function 8.E). |
| b1 | Code plug not detected. | ▶ Insert code plug correctly; replace if defective. |
| b7 | Fault in the burner controls. | ▶ Reset boiler to factory default setting (\(\Rightarrow\) service function 8.E). |
| C6 | Fan not running. | ▶ Check fan leads and fan, replace if defective. |
| CC | Outdoor temperature sensor not recognized. | ▶ Check outdoor temperature sensor and leads for interruptions, replace if defective.  
  ▶ Verify the outdoor temperature sensor is connected to terminals A and F. |
| d3 | Temperature high limit defective.  
  External guard has tripped.  
  Temperature limiter locked out. | ▶ Check temperature sensor and leads for interruptions or shorts, and replace if defective.  
  ▶ Temperature guard TB1 has tripped. Check if jumper across 8-9 or PR-P0 is missing.  
  ▶ Reset external temperature limiter (if installed). Reset LWCO (if installed). |
| d5 | External supply temperature sensor defective (low-loss header). | ▶ Check temperature sensor and leads for interruptions or shorts, and replace if defective.  
  ▶ Check whether only one temperature sensor is connected; otherwise remove second temperature sensor.  
  ▶ Reset the boiler to the factory default settings (\(\Rightarrow\) service function 8.E). |
| E2 | Supply temperature sensor defective. | ▶ Check temperature sensor and leads for interruptions or shorts, and replace if defective. |
| E3 | Additional supply temperature sensor defective. | ▶ Check temperature sensor and leads for interruptions or shorts, and replace if defective. |

</table>
| E9      | Heat exchanger safety high limit or flue gas temperature limiter has tripped. | ▶ Check flue gas safety high limit and leads for interruptions or shorts, and replace if defective.  
▶ Check heat exchanger safety high limit and leads for interruptions or shorts, and replace if defective.  
▶ Check the operating pressure.  
▶ Check temperature limit; replace if defective.  
▶ Check pump capacitor; replace pump if defective.  
▶ Check PCB fuse, replace if blown (6.3 A fuse according to IEC default).  
▶ Purge the appliance  
▶ Check heat exchanger on the DHW side; replace if clogged. |
| EA      | No flame detected. | ▶ Check that ground lead is properly connected, replace if defective.  
▶ Check that gas cock is open.  
▶ Check inlet gas pressure; correct if needed.  
▶ Check power supply.  
▶ Check electrodes for visual damage; replace if defective.  
▶ Check flue gas system; clean or repair if defective.  
▶ Check gas/air ratio; correct if out of range.  
▶ Check gas valve; replace if defective.  
▶ In room air operation, check air supply or ventilation apertures.  
▶ Clean the condensate trap.  
▶ Remove diaphragm at fan inlet connection and check for contamination or cracks.  
▶ Check heat exchanger for soiling (⇒ Chapter 15.1.6, page 70).  
▶ Check gas cock; replace if defective.  
▶ Insert code plug correctly; replace if defective. |
| F0      | Internal fault | ▶ Press reset for 3 seconds and release. When the button is released, the appliance will restart.  
▶ Check electrical plug-in contacts and ignition leads; replace PCB if defective.  
▶ Check gas/air ratio; correct if out of specification. |
| F1      | Internal data error. | ▶ Reset boiler to the factory default setting (⇒ service function 8.E). |
| F7      | Flame detected even when burner is off. | ▶ Check electrodes; replace if defective.  
▶ Check flue gas system; clean or repair if defective.  
▶ Check PCB for moisture; dry if needed. |
| FA      | After switching gas off: Flame is detected. | ▶ Check gas cock; replace if defective.  
▶ Clean condensate trap.  
▶ Check electrodes and leads; replace if defective.  
▶ Check flue gas system; clean or repair if needed. |
| Fd      | Reset button pressed by mistake. | ▶ Press reset button again.  
▶ Check cable harness to safety high limit and gas cock for ground connection. |
| Temperature gradient limiter: Temperature rise too fast | ▶ Fully open service shut-off valves.  
▶ Check electrical connection between heating zone pump and Heatronic.  
▶ Check pump plug connection per installation instructions.  
▶ Manually test operation of heating zone pump and replace if defective.  
▶ Set pump speed correctly to match maximum output. |

### Commissioning log for the appliance

**Home owner/operator:**

<table>
<thead>
<tr>
<th>Last name, first name</th>
<th>Number, Street</th>
</tr>
</thead>
<tbody>
<tr>
<td>Telephone/fax</td>
<td>ZIP code, town</td>
</tr>
</tbody>
</table>

**System installer:**

<table>
<thead>
<tr>
<th>Order number:</th>
<th>Appliance type:</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>(Complete a separate log for every appliance!)</td>
</tr>
</tbody>
</table>

**FD (Date of manufacture):**

**Date commissioned:**

- Individual appliance

**Installation location:**

- Basement
- Attic
- Garage
- other:

**Room air only:** Number and size of ventilation openings ft² (m²)

**Vent pipe routing:**

- Twin pipe system (Rigid)
- Twin pipe system (Flex)
- Concentric pipe system
- Room air
- Sealed combustion
- PVC
- CPVC
- PP
- 2”
- 3”

**Total length:** Approx. ft (m) Elbows 90 ° Qty Elbows 15 - 45 ° Qty

**Flue tightness test completed:**

- yes
- no

**CO₂ value in the combustion air at maximum nominal output:**

**O₂ value in the combustion air at maximum nominal output:**

**Notes regarding under or over pressure operation:**

### Gas setting and flue gas test:

**Gas conversion:**

- NG
- LPG (propane)

**Inlet gas pressure**

<table>

<thead>
<tr>
<th>MBTU/ft³ (kWh/m³)</th>
</tr>
</thead>
</table>

**CO₂ at max. nominal output:**

**CO₂ at minimum nominal output:**

**O₂ at maximum nominal output:**

**O₂ at minimum nominal output:**

**CO at maximum nominal output:**

**CO at minimum nominal output:**

**Flue gas temperature at maximum nominal output:**

**Flue gas temperature at minimum nominal output:**

**Maximum measured supply temperature:**

**Minimum measured supply temperature:**

### System hydraulics:

- Low-loss header, type:
  - Additional expansion vessel
  - Size/pre-charge pressure:
  - Automatic air vent present:

- Heating pump:
  - yes
  - no

- Primary secondary piping

- DHW tank/type/number/heating surface output:

- System hydraulics checked, notes:
### Modified service functions:
(Select the modified service functions and enter the values here.)

Example: Service function 7.d changed from 00 to 01

<table>
<thead>
<tr>
<th>Function</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
</tr>
</tbody>
</table>

### Heating control:

- Heating control programmed, notes:
- Documented the modified settings of the heating control in the control operating/installation instructions

### The following work has been carried out:

- Electrical connections checked, notes:
- Condensate trap filled
- Function check carried out
- Carry out a combustion air/flue gas test
- Tightness test carried out on the gas and water sides

Commissioning includes checking the settings, a visual heating leak test and a functional check of the boiler and control. The system installer conducts a test of the heating system.

This system has been checked to the extent described.

The documents have been handed over to the home owner/operator. The home owner/operator has been instructed regarding safety and operation of the boiler and accessories, including the need for regular scheduled maintenance.

**Name of service installing contractor**

**Date, owner/operator signature**

**Affix the test report here.**

**Date, system installer’s signature**

Minimum heating/DHW output (service function 3.d) .......................................................... 60
Operating mode (service function 2.F) .......................................................... 59
Permanent ignition (service function 8.F) .......................................................... 63
Pump control mode for heating operation (service function 1.E) .......................................................... 58
Pump lockout time (only ZBR..-3A) (service function 2.A) .......................................................... 59
Pump mode (only ZBR..-3A) (service function 1.F) .......................................................... 58
Pump post purge time (heating) (service function 9.F) .......................................................... 63
Reset service reminder (service function 5.A) .......................................................... 61
Restore appliance (Heatronic 3) to factory settings (service function 8.E) .......................................................... 63
Set functionality of black plug (connection NZ - LZ) (service function 5.E) .......................................................... 61
Set start speed 1 (service function 9.d) .......................................................... 63
Software version (service function 8.A) .......................................................... 62
Supply temperature required by outdoor reset control (service function 6.C) .......................................................... 61
Switching differential (service function 3.C) .......................................................... 60
Temperature at tank temperature sensor (service function A.C) .......................................................... 63
Turbine signal delay (only ZWB..-3A) (service function 9.E) .......................................................... 63
Voltage terminal 2 (service function 6.b) .......................................................... 61
Service level
First service level .......................................................... 58
Second service level .......................................................... 62
Set functionality of black plug (connection NZ - LZ) .......................................................... 61
Settings
Changing sensor curve of the heating pump .......................................................... 56
Shutdown .......................................................... 52
Steps for inspection and maintenance .......................................................... 68
Summer mode .......................................................... 54
Surface temperature .......................................................... 34
Switching the appliance OFF .......................................................... 52
Switching the appliance ON .......................................................... 52
